**VIMAR**

New flush mounting junction boxes.
High strength and solidity for hollow walls.

ISOBOX: BOXES FOR HOLLOW WALLS AND MASONRY

Strength and flexibility.
An even **better performing** and top **quality range.**

Vimar's consolidated range of flush mounting junction boxes has been supplemented with innovative solutions for hollow walls. Specifically designed with structural characteristics that guarantee top-level performance, the new junction boxes are strong and versatile, to accommodate all installation requirements, whether stand-alone or for home automation systems.
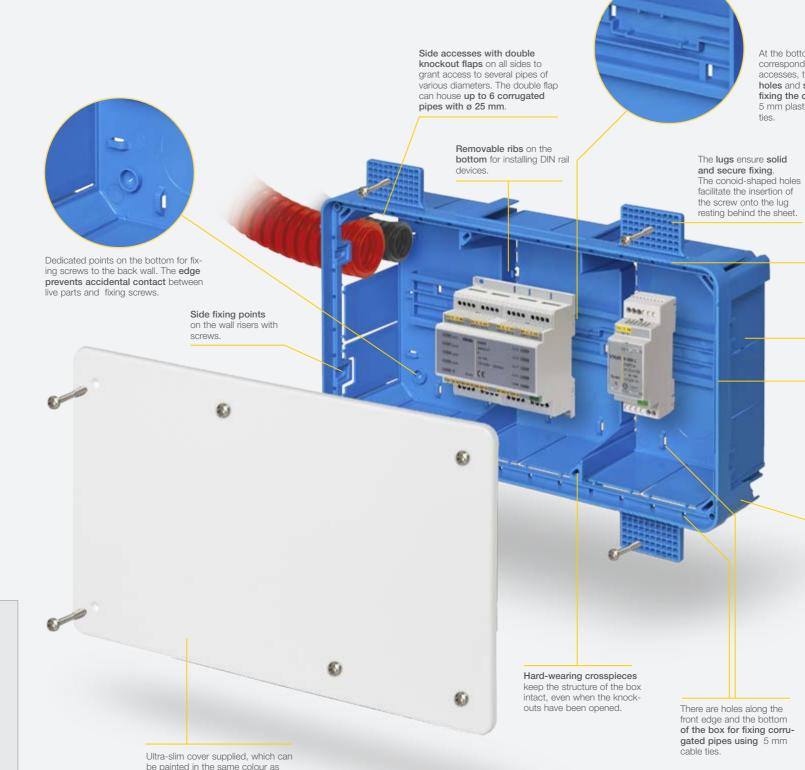

Incredibly strong to stand the test of time.

The new junction boxes are extremely resistant to warping. They feature a specific geometry, a significant thickness, fixing points which maximise the resistance of the installation, which are all aspects that help make them strong, versatile and high-performing at all times.

## Geometric shape, material thickness and hard-wearing internal crosspieces.

The box features a strong structure which is resistant to warping thanks to the thickness of the material and the crosspieces that keep it intact, even with the knockouts open for the entry of corrugated pipes.

Side accesses with double knockout flaps on all sides to grant access to several pipes of various diameters. The double flap can house **up to 6 corrugated pipes with ø 25 mm**.

Removable ribs on the **bottom** for installing DIN rail devices.

At the bottom, corresponding to the accesses, there are **holes** and **slots for fixing the cables** using 5 mm plastic cable ties.

The **lugs** ensure **solid and secure fixing**. The conoid-shaped holes facilitate the insertion of the screw onto the lug resting behind the sheet.

The serrated edge corresponding to the lugs makes it easier to identify the position of the lug concealed by the sheet and facilitates the insertion of screws for fixing the box.

Dedicated points on the bottom for fixing screws to the back wall. The **edge prevents accidental contact** between live parts and fixing screws.

Side fixing points on the wall risers with screws.

Strong structure thanks to the special geometric shape and extra thickness of the box.

The shape of the edge makes it stronger and **avoids torsion**.

Hard-wearing crosspieces keep the structure of the box intact, even when the knockouts have been opened.

There are holes along the front edge and the bottom **of the box for fixing corrugated pipes using** 5 mm cable ties.

Tracing and drilling of the wall can be done by marking the **centring points for hollow cutters ø 29 mm** found at the corners on the bottom of the box or by tracing the edge of the box on the wall. The **smooth edge** makes it possible to trace continuously along the perimeter of the box and insert the product trouble-free.
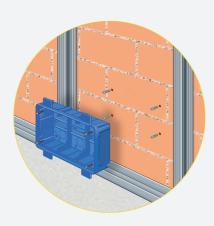

Ultra-slim cover supplied, which can be painted in the same colour as the wall.

Large accesses on the sides and bottom.
The knockouts can be removed for access of corrugated pipes of various diameters depending on the installation requirements, for instance up to 6 25-mm corrugated pipes.

Easy wiring.
Wiring is facilitated by the generous space inside the boxes.

Simplified installation to save time and effort.

Dual installation mode, to cover all site requirements.

In order to offer an effective and efficient solution to all the various site requirements, the junction boxes for hollow walls can be installed either inside the front plasterboard sheet or on the back wall.
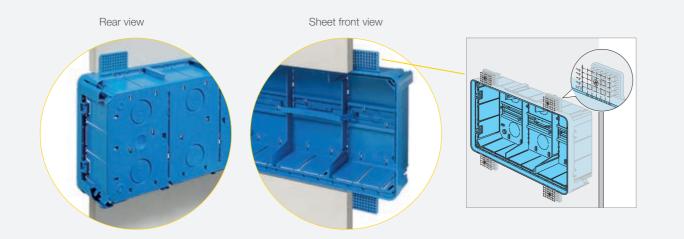

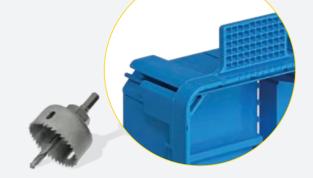

Installation on the back wall.

In construction sites, the need may arise to place a plasterboard counter-wall in front of a concrete or brick wall. To do this, the junction box for hollow walls can be fitted and fixed with screws directly in the masonry wall. The cone-shaped holes on the bottom of the box make it easier to tighten screws and the raised edge avoids contact between the screw and the live parts. The 73 mm depth of the box was devised specifically to be compatible with structures of 75 mm and more without interfering with the styling of the plasterboard wall.

Installation inside the front plasterboard sheet.

The typical way of installing these boxes is inside the plasterboard sheet. They are fixed with screws that slot into the purpose-designed side lugs. The multiple cone-shaped holes on the lugs facilitate the insertion of the screw and are always easily identifiable, even if they are covered with the sheet, thanks to the serrated edge that indicates their position.

Rear view

Sheet front view

Profile and rear centring points.

The centring points for 29 mm hollow cutters on the corners of the bottom and the smooth edge to trace the profile easily make it possible to drill the wall without mistakes.

### Seat for installation of DIN rail devices.

The box contains a purpose-designed fitting to act as a rail for fixing DIN devices, and there is a dedicated seat for perfect installation and alignment, in which to insert a 40 mm spirit level.

73 mm deep.

Compatible with structures with a depth of 75 mm.

Removable handle.

By removing the handle supplied from its original seat and placing it in the dedicated spaces on the DIN rail, the installation operations can be carried out in complete autonomy, without needing the help of colleagues. Once the job is complete, with the handle removed, the entire volume of the box is available for wiring.

VIMAR PATENT

Attention to detail for minimum impact on the wall.

The attention to detail that distinguishes all Vimar products can also be found in the new junction boxes for hollow walls, in which the **cover supplied is just 2.5 mm thick** ensuring minimal protrusion from the wall, and it ican also be painted.
The result is therefore imperceptible installation despite being in full view.

2.5 mm thick

The reduced thickness ensures minimum protrusion.

4.5 mm
Cover for masonry junction box.

2.5 mm
Cover for hollow wall junction box.

No irregularities on the surface.

The styling result is also guaranteed on painted walls.

A complete range.

The new range of flush mounting junction boxes for hollow walls is available in five sizes to accommodate all installation requirements, allowing utmost versatility.
Each box is supplied with a cover.

Dim. 205x164x73 mm
V72006

Dim. 298x164x73 mm
V72007

Dim. 402x164x73 mm

# New **IP55 covers** for masonry wall junction boxes.

To make masonry wall junction boxes even more performing and suitable for special installations in damp and dusty environments and in all places requiring insulation of no less than IP55, new covers are now available, supplied with a dedicated gasket, fitted on the inner edge.

IP55

Covers with gasket.

The new range of IP55 covers with gasket was devised to accommodate the needs of all those circumstances where the junction boxes are installed in damp, dusty environments or where there is a risk of direct contact with water.

Three different sizes for the most popular boxes.

Dim. 287x154x70 mm	Dim. 195x154x70 mm	Dim. 154x128x70 mm
V70007	V70006	V70005

New **covers** for flush mounting boxes.

The new covers for flush mounting boxes for masonry and hollow walls with 2, 3 and 4 modules are designed to minimise the visual impact on the wall of the unused lighting point.
The geometric shape and finish of the cover guarantee outstanding performance during the wall painting phases.
The 3- and 4-module covers are equipped with a support which can be used on both sides, designed to compensate for the thickness of the plaster present on the masonry wall or the thickness of the plasterboard sheet, if the box is installed inside the wall.

Cover for 3- and 4-module boxes.

The cover consists of a support to be fixed to the box using the screws provided; it is reversible and is designed to compensate for the thickness of the plaster on the wall or of the plasterboard sheet.
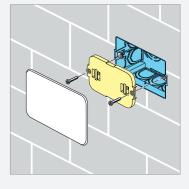

Front and side view of the cover: minimal visual impact.

Fittings for fixing the cover to the support.

Cover for 2-module boxes.

The cover for round 2-module flush mounting boxes also consists of a support and a cover. The support has 2 installation modes: for plasterboard walls using screws and for masonry walls using the claws provided.

Hollow for housing screws for installation on plasterboard walls.

Claws for hooking onto the box installed on masonry walls.

Main characteristics

- Suitable for installations in prefabricated walls consisting of elements in plasterboard, wood or plastic laminate with hollow interior or air gap which does not offer the possibility of anchoring for traditional fixings;
- use screws for plasterboard for fixing to the sheets or screws with wall plugs for fixing to masonry walls;
- centring template on the back to make the preparation of the sheet quicker and more accurate and hence also installation and composition in series;
- each side features side accesses with double knockout flaps in which corrugated pipes of various diameters can be entered and held in place using a cable tie through slots obtained on the bottom of the box. The bottom also features closed mono-diameter knockouts to grant access to a corrugated pipe with ø 32 mm (ø 52 mm in the case of box V72211);
- removal of the knockout part using:
  - scissors for side accesses,
  - cutter for the openings on the bottom,
  - pliers for the removable internal ribs;
- methods for fixing the devices to the boxes: DIN rail available from a mould on which the system devices can be installed, with the exception of box V72211 which features fixing points for metal DIN rail;
- possibility of installing devices for DIN rail (60715 TH35) with max height of 110 mm and max depth of 60 mm (max height 150 mm and max depth 92.5 mm for box V72211);
- supplied with a reduced thickness cover;
- screw tightening torque: 0.3 Nm;
- ultra strong, non-warping technopolymer;
- fire resistance (glow-wire test): 850 °C;
- degree of protection: IP40;
- rated voltage: 400 V;
- rated insulation voltage: 450 V;
- temperature after installation: -5 °C ÷ +60 °C.

ISOBOX
Flush mounting boxes for hollow walls
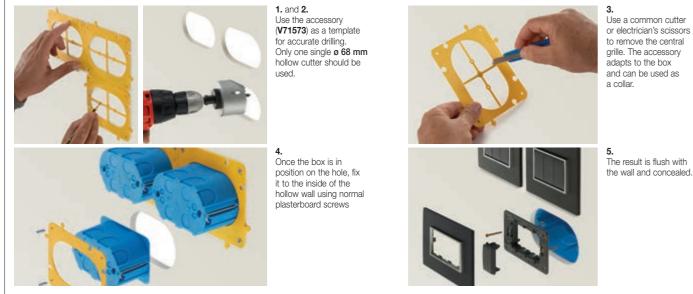

Main characteristics
- Installation method symbol Ha according to IEC 60670-1;
- suitable for installations in prefabricated walls consisting of elements in plasterboard, wood or plastic laminate with hollow interior or air gap which does not offer the possibility of anchoring for traditional fixings;
- centring plate incorporated into the back. To make the preparation of the sheet quicker and more accurate and hence also installation and composition in series, the centring plates are already provided on the back of the boxes. For all boxes, 3-, 4-, 6-/7-modules and multifunction, a single **ø 68 mm** hollow cutter should be used;
- improved retention knockouts. Each side of the box features knockouts with various diameters: 16, 20 and 25 mm. A corrugated pipe can be inserted in each knockout, and then held in place by a special lug obtained from the bottom of the box;
- removal of knockout parts using a cutter or mechanical impact using appropriate tools;
- metal lugs, with progressive tightening:
  - during the positioning of the box, they are concealed, to allow

easy insertion into the hole;
  - during the mounting phase, progressive tightening is used to attach them to sheets of between 1 and 38 mm;
  - and if you want to remove the box, simply loosen the screws and the lugs return to their concealed seat;
- methods for fixing the devices to the boxes: using screws (supplied for art. V71701);
- ultra strong, non-warping technopolymer;
- fire resistance (glow-wire test): 850 °C;
- degree of protection of the part mounted in the hollow wall: IP20 (IP30 for art. V71720);
- rated insulation voltage: 450 V;
- temperature after installation: -5 °C ÷ +60 °C.

Conformity to Standards
LV Directive, EN 60670-1, EN 60670-22 (for art. V71718), EN 60670-24 (for art. V71720) standards

---

V71703 - General features

Multi-diameter knockouts with improved retention:
on the sides and on the bottom, for solid retention of corrugated pipes and also for sheathed cables and twisted-pair phone cables.

Metal claws and progressive tightening screws:
greater strength when installing the support and improved anchoring to the wall.

High strength and modular design:
made from resistant material, in a widely modular range to suit many different application needs.

Corner lugs:
improve adherence to the wall when installed on the front and support when placed at the back.

Example of installation in series of the flush mounting boxes for hollow walls with multifunction accessory.

1. and **2.**
Use the accessory (**V71573**) as a template for accurate drilling. Only one single **ø 68 mm** hollow cutter should be used.

3.
Use a common cutter or electrician's scissors to remove the central grille. The accessory adapts to the box and can be used as a collar.

4.
Once the box is in position on the hole, fix it to the inside of the hollow wall using normal plasterboard screws

5.
The result is flush with the wall and concealed.

Examples of use of flush mounting boxes for hollow walls.

Flush to wall cover (**V71631**). Can be hooked directly onto the antimortar cover without the use of screws. Ultra-slim and can be painted with the same paint used for the walls.

Rigid and strong flush mounting box (**V71718**). Made from technopolymer, resistant up to 850 °C.

Progressive tightening screws.

Dividing screen (**V71552**) for the subdivision of electrical circuits.

Knockouts for inserting corrugated pipes.

Antimortar cover (**V71328**) to close the box and cover it with plaster, making it invisible. Ensures an excellent styling finish.

Plana 14 modules with support (14620), cover plate (14690...) and box V71720; or:
Eikon 14 modules with support (20620), cover plate (20660...) and box V71720; or:
Arké 14 modules with support (19620), cover plate (19660...) and box V71720.

Designed for fixing to DIN rail (60715 TH35).
Dissipated power: 15 W max; rated voltage: 400 V.

Cover (V71630)
For flush mounting boxes V71720 and V71320.

Accessories for flush mounting boxes for hollow walls

V71550	Dividing screen for rectangular flush mounting boxes V71303…, V71304…, V71306…, V71703, V71704, V71706, yellow
V71551	Horizontal dividing screen for rectangular flush mounting boxes V71320, V71321, V71620, V71720, 09920, 09921, yellow. Designed to create electrically separate compartments inside the box
V71552	Horizontal dividing screen for flush mounting boxes V71318 and V71718, yellow Designed to create electrically separate compartments inside the box

V71550   V71551   V71552

Flush mounting junction boxes for masonry walls
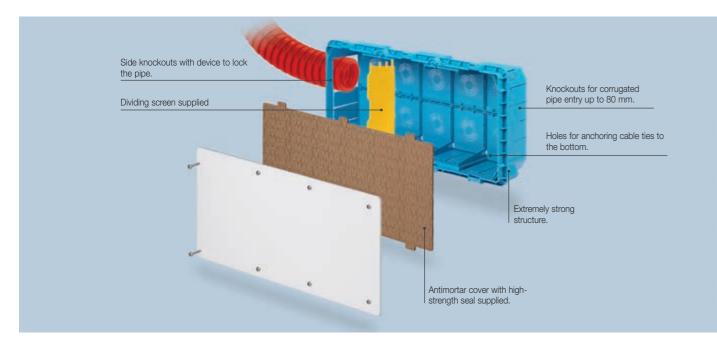

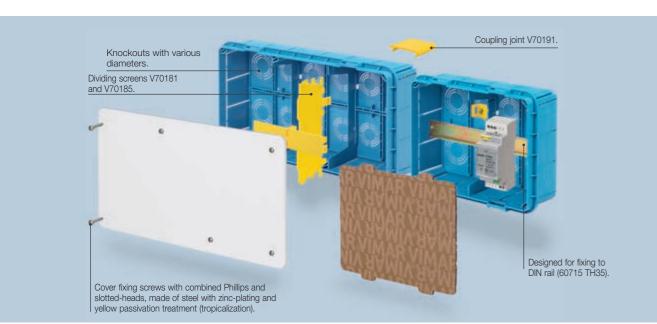

VIMAR

Main characteristics

- 13 patented models, also available with flush depth of 120 mm;
- possibility of creating multiple series using coupling joints V70191;
- cover with a finish that favours anchoring of the wall paint and ample protrusion from the edge of the box;
- cover screws 30 mm, 6 mm bigger than the standard, to favour fixing where the plaster has an irregular thickness;
- possibility of adjusting the cover for levelling;
- dividing screen V70181 for the subdivision of electrical circuits;
- designed for fixing DIN rail (60715 TH35) by means of knockouts on the internal ribs (from article V70006);
- knockouts with locking device for the insertion of a corrugated pipe of up to ø 80 mm, that opens using scissors or a cutter;
- fire resistance (glow-wire test): 650 °C;
- mechanical resistance of the covers provided: 2 J;
- highly shock resistant covers (20 J) available;
- degree of protection: IP40;
- rated insulation voltage: 450 V;
- temperature after installation: -5 °C ÷ +60 °C;

Flush mounting junction boxes for masonry walls				
Code	Dimensions (mm)	Size	Number of DIN modules	Dissipated power (Watts)
V70006	195X154X70	6	5	13
V70007	287X154X70	7	10	24
V70008	391X154X70	8	16	30

V70207	248X248X120	7 high capacity	8	26
V70211	515X248X120	11 high capacity	24	69

Conformity to Standards

LV Directive, EN 60670-1, EN 60670-22 Standards

Side knockouts with device to lock the pipe.

Dividing screen supplied

Knockouts for corrugated pipe entry up to 80 mm.

Holes for anchoring cable ties to the bottom.

Extremely strong structure.

Antimortar cover with high-strength seal supplied.

Knockouts with various diameters.

Dividing screens V70181 and V70185.

Coupling joint V70191.

Designed for fixing to DIN rail (60715 TH35).

Cover fixing screws with combined Phillips and slotted-heads, made of steel with zinc-plating and yellow passivation treatment (tropicalization).

Main characteristics

- Generous internal volume to contain conveniently and with the utmost accessibility the modern equipment of wiring devices and all the cables necessary for their power supply and operation;
- possibility of creating electrically separate modular compartments using V71550;
- knockouts designed for the insertion of pipes with various cross-sections;
- fixing lugs of the support screws with zinc-plating treatment and olive green passivation covered with a special waxy substance that prevents the thread from clogging during installation operations and plastering and favours screwing;
- knockouts can be opened using scissors or a cutter;
- antimortar protection for round ø 60 mm boxes, 3-, 4-, 5- and 7-modules using dedicated yellow covers;
- high-tech solutions covered by multiple patents;
- ultra strong, non-warping technopolymer;
- fire resistance (glow-wire test) 650 °C (960 °C .AU versions);
- rated insulation voltage: 450 V;
- temperature after installation: -5 °C ÷ +60 °C.

Conformity to Standards
LV Directive, Standard EN 60670-1
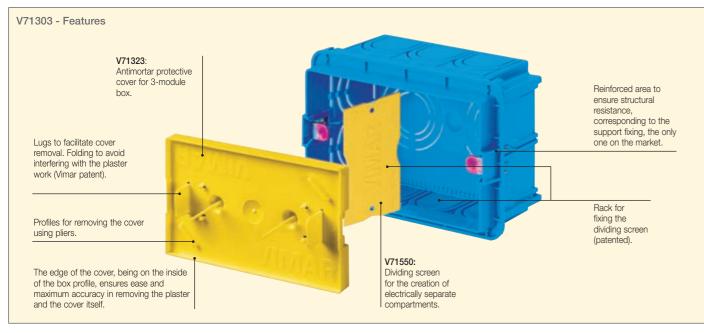

Dividing screen for the creation of electrically separate modular compartments.

Knockouts on every side with various diameters.

Perfectly placed boxes thanks to reference and locking pins.

V71303 - Features

V71323: Antimortar protective cover for 3-module box.

Lugs to facilitate cover removal. Folding to avoid interfering with the plaster work (Vimar patent).

Profiles for removing the cover using pliers.

The edge of the cover, being on the inside of the box profile, ensures ease and maximum accuracy in removing the plaster and the cover itself.

V71550: Dividing screen for the creation of electrically separate compartments.

Reinforced area to ensure structural resistance, corresponding to the support fixing, the only one on the market.

Rack for fixing the dividing screen (patented).

Flush mounting boxes - Concealed decorative covers

VIMAR

Main characteristics

- The article consists of a yellow support with screws for fixing to the flush mounting box (for hollow walls and masonry walls) and smooth white cover for coupling with the support by snap-fixing;
- reversible 3- and 4-module supports to compensate for the thickness of the plaster on the wall or the plasterboard sheet;
- the reduced thickness of the cover and the absence of screws makes it possible to minimise the visual impact on the wall of the unused lighting point;
- the surface of the cover has an excellent finish for the colour to grip during the wall painting process;
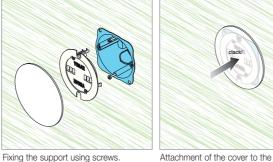

- the round cover for 2-module boxes (art. V71632) envisages two support fixing modes: using screws or using claws, supplied.
  The support features two hollows for fixing using screws directly onto the plasterboard sheet.
