# 4 input/4 output device

## General characteristics and functions

Device with 4 inputs/outputs, 4 NO relay outputs 16 A 250 V~, programmable with control function for lights, roller shutters with slat orientation, push buttons for local control, 4 programmable digital inputs for potential-free contacts, KNX standard, installation on DIN rails (60715 TH35), occupies 4 modules size 17.5 mm.

01522.1

### General characteristics

The device is designed to manage 4 inputs and 4 generic outputs for typical applications in the service industry (access to offices, hospital or hotel rooms, swimming pools, saunas, sports facilities, restricted access areas, etc.). The device has 4 ON/OFF inputs and 4 relay outputs 16 A 250 V~.

It is also designed to work as a virtual pocket function for the presence control in the room.

Outputs 1-2 and 3-4 can be used to control roller shutters or Venetian blinds.

### Functions

The functions available are the same for all channels.

For "Single outputs", the following functions are available for the outputs:

- Disabled  
channel without function;
- Switching module  
the output is switched according to the other parameters;
- Stair light  
depending on the other parameters, the output is switched for a period of time (one-position stable relay).

Two outputs can be grouped together (OUT1/OUT2 and OUT3/OUT4) to obtain the following functions:

- Roller shutter
- Venetian blinds

For the inputs:

- Disabled  
channel without function;
- **Grouped channels:** control or roller shutter function (IN 1/2 and IN 3/4 are connected to two separate control devices - e.g. 20062);
- **Single channels:** switching module, counter, scenario, short/long switching module, sequences function. Dimmer control with 1 button, roller shutter with 1 button.

### Manual operation

Press the  push button to enter manual mode to check the output connections. Press push buttons OUT1, OUT2, OUT3, OUT4 to control the related outputs. During manual operation, outputs OUT1/OUT2 and OUT3/OUT4 are interlocked to prevent damaging any motors connected, and messages received from the bus are not managed.

### Behaviour after powering on/off the Bus

Bus off: depending on the parameter settings.

Bus on: depending on the parameter settings.

### Behaviour after reset

As for Bus power-on.

# 4 input/4 output device

## General characteristics and functions

### The KNX Secure protocol

The device is used to activate the “KNX SECURE” data encryption protocol, entering the QR code or the digits in ETS and also creating a password associated to the project.

**Note:** If the QR code printed on the label is too small, take a photo of it with a smartphone and enlarge it.

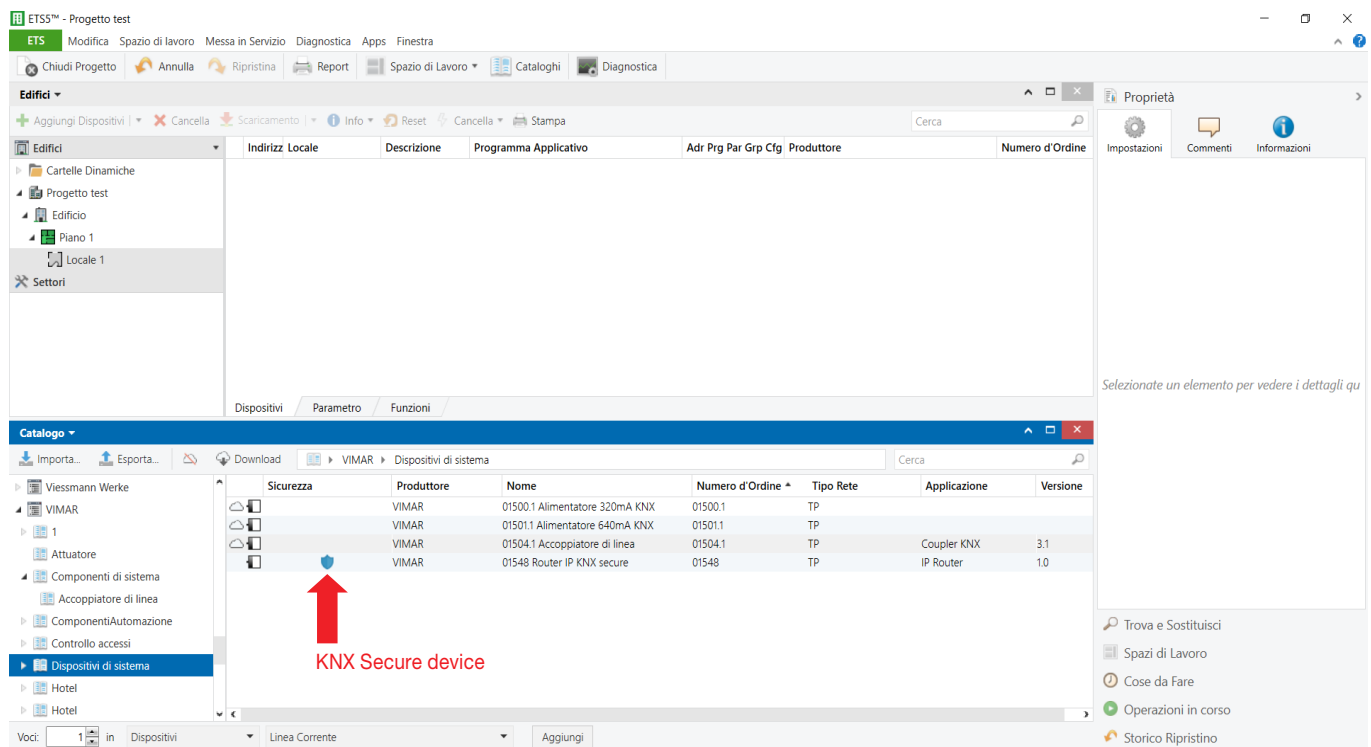

The password is mandatory in the following cases:

- when enabling the Secure part of the devices in the project
- when entering the certificate of a Secure device in the project

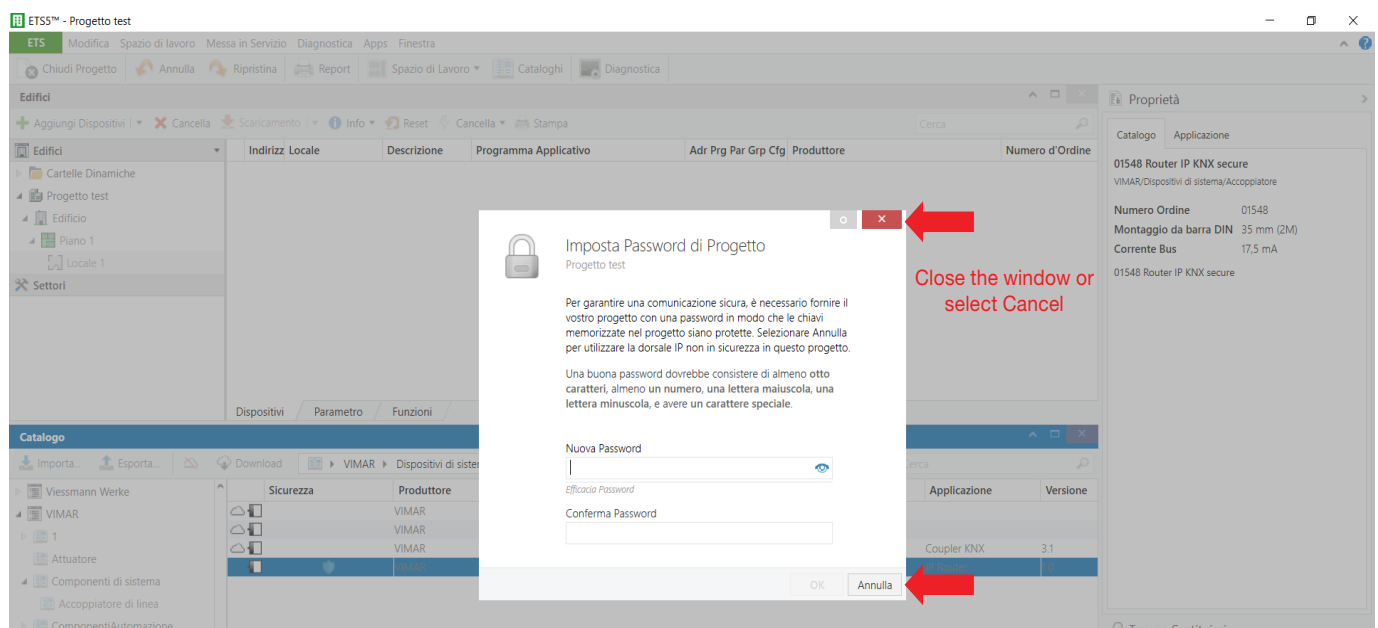

If the Secure part of a device is disabled, it acts exactly like a device that does not support this protocol.

If you do not wish to enable the Secure part, when importing the device into the project close the Secure request window as described in the following procedure.

1. Add the Secure device to the ETS project.

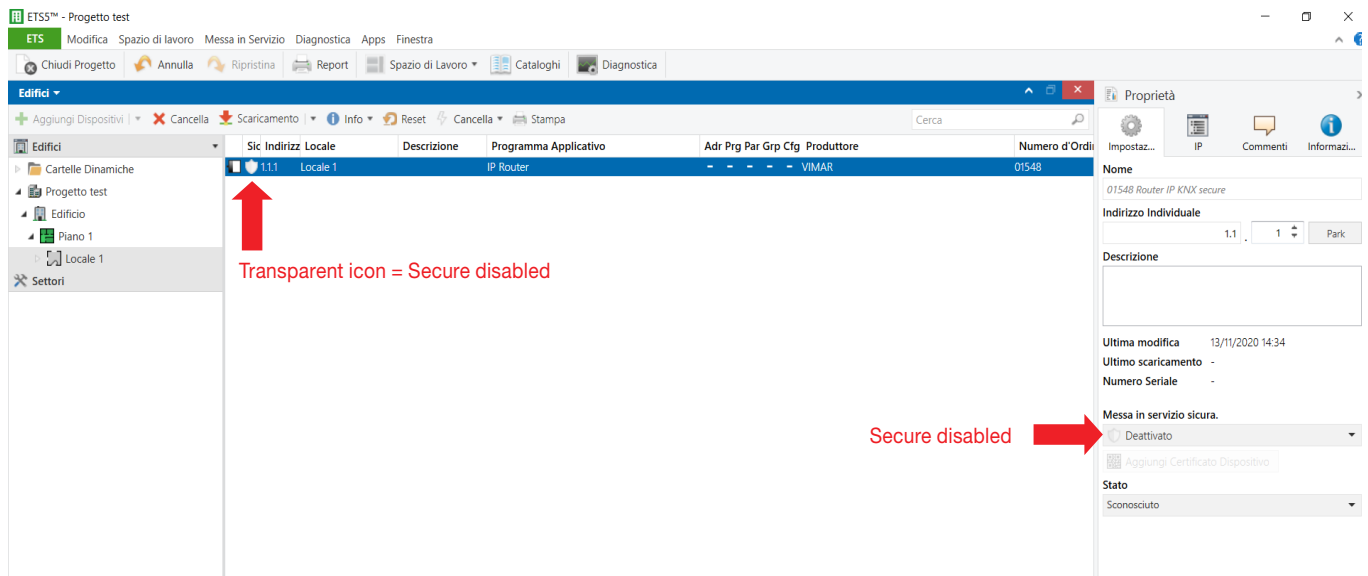

2. Ignore the set password request.

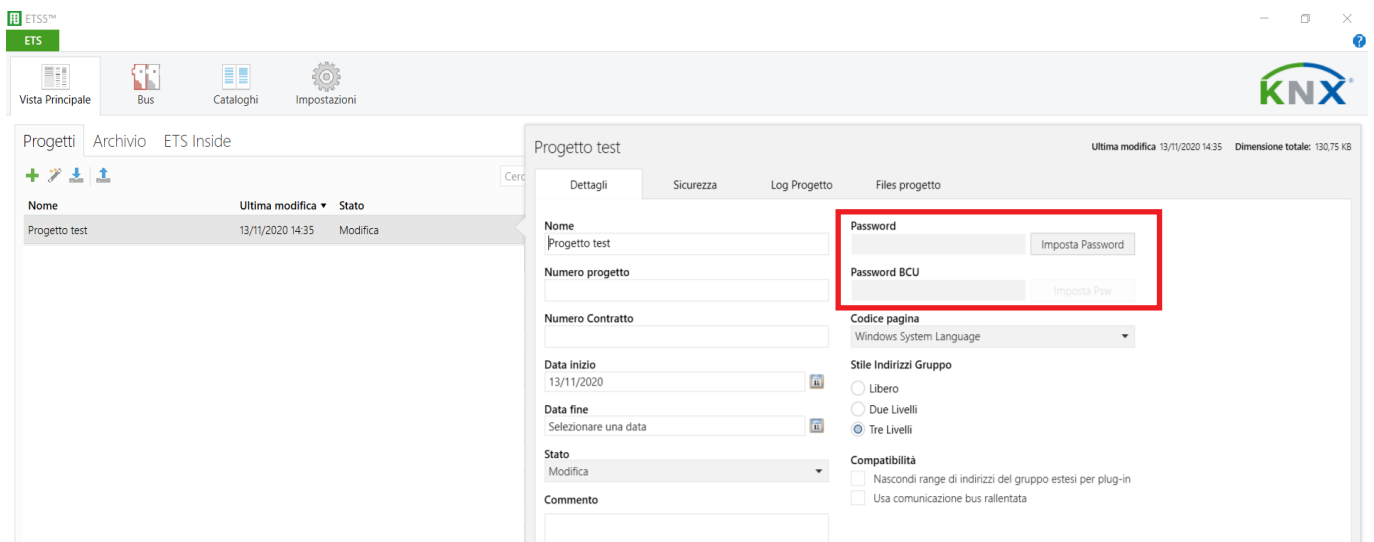

# 4 input/4 output device

## General characteristics and functions

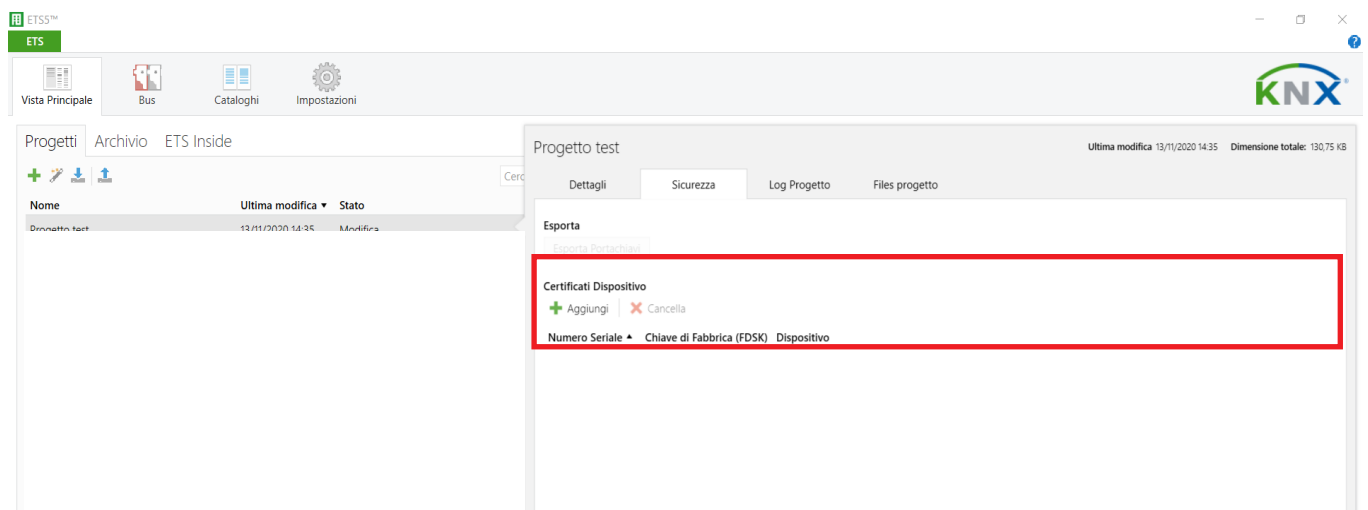

3. The device is displayed with the Secure part disabled.

4. No password is associated to the project.

5. No certificate is associated to the project.

# 4 input/4 output device

## Communication objects and ETS parameters

### List of existing communication objects

The following objects are available for each channel, depending on the function and settings; they are identical for every channel or for pairs of channels used for roller shutters. If a channel is not on there are no communication objects.

### Output communication objects

	Number ▲	Name	Object Function	Description	Group Address	Length	C	R	W	T	U	Data Type
➡	1	Out 1	Switch on/off			1 bit	C	-	W	-	U	switch
➡	4	Out 1	Block			1 bit	C	-	W	-	U	enable
➡	5	Out 1	Scene			1 byte	C	-	W	-	U	scene control
➡	6	Out 1	Status			1 bit	C	R	-	T	-	switch
➡	7	Out 1	Logic 1			1 bit	C	-	W	-	U	boolean
➡	8	Out 1	Logic 2			1 bit	C	-	W	-	U	boolean
➡	9	Out 1	Logic 3			1 bit	C	-	W	-	U	boolean
➡	10	Out 1	Logic 4			1 bit	C	-	W	-	U	boolean
➡	15	Out 2	Stair case			1 bit	C	-	W	-	U	start/stop
➡	17	Out 2	Block			1 bit	C	-	W	-	U	enable
➡	19	Out 2	Status			1 bit	C	R	-	T	-	switch
➡	111	Central function	Switch on/off			1 bit	C	-	W	-	U	switch

**Example:** *Output 1* - Switching module with block on, scenario on and logic with 4 objects, *Output 2* - Stair light with block on

	Number ▲	Name	Object Function	Description	Group Address	Length	C	R	W	T	U	Data Type
➡	1	Out 1/2	Shutter up/down			1 bit	C	-	W	-	U	up/down
➡	2	Out 1/2	Blinds up/down /stop			1 bit	C	-	W	-	U	up/down
➡	4	Out 1/2	Scene			1 byte	C	-	W	-	U	scene control
➡	5	Out 1/2	Act. direction			1 bit	C	R	-	T	-	up/down
➡	6	Out 1/2	Position (Absolute)			1 byte	C	-	W	-	-	percentage (0..100%)
➡	7	Out 1/2	abs. Position of blinds			1 byte	C	-	W	-	-	percentage (0..100%)
➡	8	Out 1/2	Position (Actual)			1 byte	C	R	-	T	-	percentage (0..100%)
➡	9	Out 1/2	Actual Position of slats			1 byte	C	R	-	T	-	percentage (0..100%)
➡	10	Out 1/2	Act. position valid			1 bit	C	R	-	T	-	boolean
➡	11	Out 1/2	Drive to reference			1 bit	C	-	W	-	U	up/down
➡	12	Out 1/2	Drive to limit			1 bit	C	-	W	-	U	up/down
➡	13	Out 1/2	State upper Position			1 bit	C	R	-	T	-	boolean
➡	14	Out 1/2	State lower Position			1 bit	C	R	-	T	-	boolean
➡	16	Out 1/2	Block manual mode			1 bit	C	-	W	-	U	enable
➡	17	Out 1/2	Move			1 bit	C	R	-	T	-	boolean
➡	89	Out 1/2	Alert (Wind)			1 bit	C	-	W	-	U	alarm
➡	90	Out 1/2	Alert (Rain)			1 bit	C	-	W	-	U	alarm
➡	91	Out 1/2	Alert (Frost)			1 bit	C	-	W	-	U	alarm
➡	92	Out 1/2	Block			1 bit	C	-	W	-	U	enable

**Example:** *Out 1/2* - Venetian blinds with possibility to control the position from the bus and with warnings active

## Communication objects and ETS parameters

### Communication objects per channel

Number	Name in ETS	Function in ETS	Description	Length	Flag 1					
					C	R	W	T	U	
OUTPUTS			With outputs OUT1, OUT2, OUT3 and OUT4 configured as single outputs							
1	Out 1	On/ off	(If the output is enabled as "Switching module") to switch the output On/Off	1 bit	X		X		X	
2	Out 1	Stair light	(If the output is enabled as "Stair Light") to switch the output on, with timed switch-off.	1 bit	X		X		X	
3	Out 1	Force	(If the output "Block" parameter is on, with "Force" function) to force the output On/Off from the Bus	2 bit	X		X			
4	Out 1	Block	((If the output "Block" parameter is on, with "Block" function) to block the output control from the Bus	1 bit	X		X		X	
5	Out 1	Scenario	(If the output "Scenario" parameter is on), to activate and, if required, store (if the parameter is active) a scenario associated to the output	1 byte	X		X		X	
6	Out 1	State	(If the output is enabled as "Switching module") to know the output state	1 bit	X	X		X		
7... 13	Out 1	Logic 1... 7	(If the logic function for the output is on) A number of objects from 1 to 7 can be selected for OR, AND, XOR logics with the "On/off" object to determine the output state.	1 bit	X		X		X	
14... 26	Out 2 (see similar objects for Out 1)		As per Out 1							
27... 39	Out 3 (see similar objects for Out 1)		As per Out 1							
40... 52	Out 4 (see similar objects for Out1)		As per Out 1							
OUTPUTS			With outputs OUT1/2 and OUT3/4 configured as roller shutter or Venetian blinds							
1	Out 1/2	Roller shutter Up/Down	(If the output is enabled as "Roller shutter" or "Venetian blinds") To move the Venetian blinds/roller shutter.	1 bit	X		X		X	
2	Out 1/2	Slats up/down/stop	(If the output is enabled as "Venetian blinds") To rotate/stop the slats.	1 bit	X		X		X	
3	Out 1/2	Stop	(If the output is on as "Roller shutter") To stop the roller shutter.	1 bit	X		X		X	
4	Out 1/2	Scenario	(If the output is on as "Venetian blinds" or "Roller shutter" and "Scenario" is on) To call up the scenarios from the Bus.	1 byte	X		X		X	
5	Out 1/2	Actual direction	(If the output is on as "Venetian blinds" or "Roller shutter" and "select objects for absolute position" is on) Object signalling the roller shutter direction of movement. Reading the state, the object responds with the last movement made or the current one if the roller shutter is moving (1 = up, 0 = down).	1 bit	X	X		X		
6	Out 1/2	Position (Absolute)	(If the output is on as "Venetian blinds" or "Roller shutter" and "select objects for absolute position" is on) To set the roller shutter position from a supervisor (0% = all up, 100% = all down).	1 byte	X		X			
7	Out 1/2	Absolute slat position	(If the output is on as "Venetian blinds" and "select objects for absolute position" is on) To set the slat position from a supervisor (0% = open, 100% = closed).	1 byte	X		X			
8	Out 1/2	Position (Actual)	(If the output is on as "Venetian blinds" or "Roller shutter" and "select objects for absolute position" is on) To know the actual position of the roller shutter (0% = all up, 100% = all down).	1 byte	X	X		X		
9	Out 1/2	Current slat position	(If the output is on as "Venetian blinds" and "select objects for absolute position" is on). To know the actual slat position.	1 byte	X	X		X		
10	Out 1/2	Valid actual position	(If the output is on as "Venetian blinds" or "Roller shutter" and "select objects for absolute position" is on) To know the actual roller shutter position.	1 bit	X	X		X		
11	Out 1/2	Door to reference	(If the output is on as "Venetian blinds" or "Roller shutter" and "select objects for absolute position" is on) Object used to move the roller shutter Up/Down: sends a bit= 1 to the Bus to raise or a bit=0 to lower (the device will ignore all other commands sent to the Bus until the output switches off within the set time)	1 bit	X		X		X	
12	Out 1/2	Door at limit	(If the output is enabled as "Venetian blinds" or "Roller shutter" and the "Driving Area - Limitation" is on) Object used to move the roller shutter Up/Down: receives a bit =1 from the Bus to raise or a bit = 0 to lower.	1 bit	X		X		X

Number	Name in ETS	Function in ETS	Description	Length	Flag 1				
					C	R	W	T	U
13	Out 1/2	Upper state - Position	(If the output is on as "Venetian blinds" or "Roller shutter" and "select objects for absolute position" is on) The device sends a bit to 1 when the upper limit stop is reached.	1 bit	X	X		X	
14	Out 1/2	Lower state - Position	(If the output is on as "Venetian blinds" or "Roller shutter" and "select objects for absolute position" is on) The device sends a bit to 1 when the lower limit stop is reached.	1 bit	X	X		X	
15	Out 1/2	Automatic lock	(If the output is enabled as "Venetian blinds" or "Roller shutter" and "Automatic roller shutter operation" is on) To enable/disable the automatic operation (rain, wind, etc.).	1 bit	X		X		X
16	Out 1/2	Lock mode manual	(If the output is enabled as "Venetian blinds" or "Roller shutter") To enable/disable the manual operation (controlled from a button via Bus).	1 bit	X		X		X
17	Out 1/2	Move	(If the output is on as "Venetian blinds" or "Roller shutter" and "select objects for absolute position" is on) Object that sends a bit = 1 when the movement starts, or a bit = 0 when the movement ends. It is also possible to read the current state.	1 bit	X	X		X	
89	Out 1/2	Warning (Wind)	(If the output is enabled as "Venetian blinds" or "Roller shutter" and the "Warning Function" is on with "Warning Wind") to move the roller shutter/Venetian blinds to the position for this type of warning set in the specific parameters.	1 bit	X		X		X
90	Out 1/2	Warning (Rain)	(If the output is enabled as "Venetian blinds" or "Roller shutter" and the "Warning Function" is on with "Warning Rain") to move the roller shutter/Venetian blinds to the position for this type of warning set in the specific parameters.	1 bit	X		X		X
91	Out 1/2	Warning (Frost)	(If the output is enabled as "Venetian blinds" or "Roller shutter" and the "Warning Function" is on with "Warning Frost") to move the roller shutter/Venetian blinds to the position for this type of warning set in the specific parameters.	1 bit	X		X		X
92	Out 1/2	Block	(If the output is enabled as "Venetian blinds" or "Roller shutter" and the "Warning Function" is on with "Block") to block the roller shutter at the limit stop with a bit to "1" (upper or lower, according to the parameters).	1 bit	X		X		X
97	Automatic A	Automatic operation 1 - Position	(If the "Automatic operation" parameter of "Block-A" is on) To automatically control this roller shutter output object which can recall specific positions similar to scenarios.	1 bit	X		X		
98	Automatic A	Automatic operation 2 - Position	(If the "Automatic operation" parameter of "Block-A" is on) To automatically control this roller shutter output object which can recall specific positions similar to scenarios.	1 bit	X		X		
99	Automatic A	Automatic operation 3 - Position	(If the "Automatic operation" parameter of "Block-A" is on) To automatically control this roller shutter output object which can recall specific positions similar to scenarios.	1 bit	X		X		
100	Automatic A	Automatic operation 4 - Position	(If the "Automatic operation" parameter of "Block-A" is on) To automatically control this roller shutter output object which can recall specific positions similar to scenarios.	1 bit	X		X		
101	Automatic B	Automatic operation 1 - Position	(If the "Automatic operation" parameter of "Block-B" is on) To automatically control this roller shutter output object which can recall specific positions similar to scenarios.	1 bit	X		X		
102	Automatic B	Automatic operation 2 - Position	(If the "Automatic operation" parameter of "Block-B" is on) To automatically control this roller shutter output object which can recall specific positions similar to scenarios.	1 bit	X		X		
103	Automatic B	Automatic operation 3 - Position	(If the "Automatic operation" parameter of "Block-B" is on) To automatically control this roller shutter output object which can recall specific positions similar to scenarios.	1 bit	X		X		
104	Automatic B	Automatic operation 4 - Position	(If the "Automatic operation" parameter of "Block-B" is on) To automatically control this roller shutter output object which can recall specific positions similar to scenarios.	1 bit	X		X		
<b>INPUTS</b>									
<b>In IN 1/2 and IN 3/4 mode, single channels</b>									
53	In 1	Switching module	(If the Input is on with "Switching to an object" function), to manage On/Off sending to input contact edges. If the sub-function "Toggle on rising/falling edge" is on, to manage the On/Off sequence on closing or opening the input contact, this State object must also be associated to the same group.	1 bit	X	X		X	
53	In 1	Send value - up	(If the Input is on with "Switching module with several objects" function with sub-function "on the edge"), to send an On or Off value, selected in the configuration, to the rising edge.	1 bit	X	X		X	
53	In 1	Function short press	(If the Input is on with "Switching module with several objects" function with sub-function "On/Off", "On", "Off"), to send an On, Off, Toggle On/Off value for short press.	1 bit	X	X		X

56	In 1	Counter	(If the Input is on with "Counter" function with 8 bit type) to enable the pulse counter function on the input	1 byte	X	X		X		
56	In 1	Counter	(If the Input is on with "Counter" function with 16 bit type) to enable the pulse counter function on the input	2 byte	X	X		X		
56	In 1	Counter	(If the Input is on with "Counter" function with 32 bit type) to enable the pulse counter function on the Input	4 byte	X	X		X		
56	In 1	State	(If the Input is on with "Single button control") it is possible to know the On/Off state of a dimmer controlled by a button connected to this Input	1 bit	X		X	X	X	
56	In 1	Toggle state short press	(If the Input is on with "Switching module with several objects" function with sub-function "On/Off"), to know the input state: this input must be associated to the control to obtain the Toggle On/Off function for short press.	1 bit	X		X			X
57	In 1	Toggle state long press	(If the Input is on with "Switching module with several objects" function with sub-function "On/Off"), to know the input state: this input must be associated to the control to obtain the Toggle On/Off function for long press.	1 bit	X		X			X
61	In 1	Object block	(With any function/sub-function, if the "Block" parameter is on) - to block the input operation via a 1 bit sent to the Input group	1 bit	X		X			X
62... 70	In 2 (see similar objects for In 1)		as per IN 1							
71... 79	In 3 (see similar objects for In 1)		as per IN 1							
80... 88	In 4 (see similar objects for In 1)		as per IN 1							
<b>INPUTS</b>										
<b>In IN 1/2 and IN 3/4 mode, grouped channels</b>										
53	In 1/2	On/Off control	(If the Input is on with "Dimmer control" function) it is possible to control a dimmer in On/Off via a double contact (e.g. 2 N.O. buttons) where the two buttons are connected to inputs 1 and 2 on the device, and with a <i>short closing</i> of IN 1 will switch On and with the <i>short closing</i> of IN 2 will switch Off	1 bit	X	X		X		
53	In 1/2	Roller shutter	(If the Input is on with "Sun protection" function) to stop a roller shutter via a double contact (e.g. 2 N.O. buttons) where the two buttons are connected to inputs 1 and 2 of the device, and to stop any of the two inputs can be enabled	1 bit	X	X		X		
54	In 1/2	Dimmer control	(If the Input is on with "Dimmer control" function) it is possible to control a dimmer via a double contact (e.g. 2 N.O. buttons) where the two buttons are connected to Inputs 1 and 2 of the device, and with a <i>long closing</i> of IN 1 or IN 2 will increase/decrease according to the set parameters	4 bit	X	X		X		
54	In 1/2	Slats/stop control	(if the Input is on with "sun protection" function) it is possible to control a roller shutter moving up/down via a double contact (e.g. 2 N.O. buttons) connected to Inputs 1/2 of the device	1 bit	X	X		X		
61	In 1/2	Object block	(With any function/sub-function, if the "Block" parameter is on) - to block the input operation via a "1" bit sent to the Input group	1 bit	X		X			X
71... 79	In 3/4 (see similar objects for In 1/2)		As per IN 1 and 2							
<b>VIRTUAL POCKET</b>										
105	Virtual pocket	First motion sensor	(If the "Virtual pocket" function is on) To receive an indication from a motion sensor.	1 bit	X		X			X
106	Virtual pocket	Second motion sensor	(If the "Virtual pocket" function is on and the "Second motion sensor" is enabled) To receive an indication from a second motion sensor.	1 bit	X		X			X
107	Virtual pocket	Activity signalling	(If the "Virtual pocket" function is on and "Activity signalling" is enabled) To receive an indication from a second motion sensor.	1 bit	X		X			X

## Communication objects and ETS parameters

### Reference ETS parameters

#### General

The following parameters are exclusive for all channels.

#### General parameters

The interlock between outputs is useful for example for the fan-coil controls, to avoid the two inputs from being enabled at the same time.

ETS text	Values available [Default value]	Comment
Debounce time	10..120 ms [10]	Minimum input contact on time
Long time button [s]	0.5-30 sec. [3]	Minimum input contact on time for functions associated to the long press
Interlock enabled	0=off 1=on [0]	Only one output (e.g. for the fan coil) can be on at a time
Enabled for outputs	3 = A B	If "interlock enabled": outputs for which it will be on. If "A B" for example, it will not be possible to activate Out 1 and 2 at the same time
	5 = A C	
	9 = A D	
	6 = B C	
	10 = B D	
	12 = C D	
	7 = A B C	
	11 = A B D	
	13 = A C D	
	14 = B C D	
	15 = A B C D	
	[7]	

Continued

Continued

ETS text	Values available [Default value]	Comment
Interlock time [ms]	100-3000	If "interlock enabled": time elapsing between the "Off" of an output and the next "On" of another output interlocked to the previous one
	[100]	

Debounce time  [ms]

Time Button long  [s]

Interblock Active ☐ Inactive ☒ Active

Active for Outputs

Interblock time  [ms]

General settings

### Parameter configuration

Define the input/output details.

ETS text	Values available [Default value]	Comment
Logic inputs on: - Input function 1/2 - Logic function 3/4	0 = off	Single channels: the two inputs are independent. Grouped channels: using the two inputs together (e.g. with a 20062)
	2 = single channels	
	1 = grouped channels	
Outputs: - Out 1/2 - Out 3/4	[0]	For "Single output" you can choose "Switching module" or "Stair light" corresponding to a two-position stable or one-position stable relay.
	0 = Off	
	1 = Single output	
	2 = Venetian blinds	
	3 = Roller shutter	
	[0]

## Communication objects and ETS parameters

### Outputs

#### Output: switching module 1... 4

The following parameters are available for each channel and are identical for all of them.

#### Parameter configuration

Management of outputs 1/2/3/4 set as switching module.

ETS text	Values available [Default value]	Comment
Type	0 = normally closed 1 = normally open [1]	To define if the relay output is normally open or closed
Activation delay	0... 30000 s [0]	Activation delay in seconds
Deactivation delay	0... 30000 s [0]	Deactivation delay in seconds
Centralised control function	0 = off 1 = on [0]	Centralised function (to control more than one output from the Bus at the same time)
Block/Force	0 = no action 1 = Block 2 = Force	To block or force an output from the Bus
State at block state start	0 = Off	If block on
	1 = On	
	2 = no change [2]	
State at block state end	0 = Off	If block on
	1 = On	
	2 = no change [2]	
Behaviour at Bus power on	0 = Off	To define the relay output state at bus power on
	1 = On	
	2 = no change [2]	

Continued

Continued

ETS text	Values available [Default value]	Comment
Behaviour at Bus power off	0 = Off	To define the relay output state at bus power off
	1 = On	
	2 = no change [2]	
Logic function	0 = off	To enable logics on the outputs (AND, OR, XOR) for up to 7 objects
	1 = on	
	[0]	
Scenario	0 = off	Scenario activation If on, an additional page is displayed (Output, secondary element scenario)
	1 = on	
	[0]

## Communication objects and ETS parameters

### Output, secondary element scenario

For each output, 8 scenario storage possibilities are available. For each scenario, the scenario index and the On or Off value for the output can be selected.

### Scenario parameters (8 scenarios per output)

ETS text	Values available [Default value]	Comment
Store scenarios	0 = Off 1 = On [0]	The "Store scenarios" function is used to store the state linked to a scenario with a message from the Bus (scene learn).
Scenario 1	Off 1... 64 [Off]	Used to select the scenario index.
Scenario 1	0=Off 1=On [0]	To define the relay output state when scenario called up.
Scenario 2	Off 1... 64 [Off]	Used to select the scenario index.
Scenario 2	0=Off 1=On [0]	To define the relay output state when scenario called up.
Scenario 3	Off 1... 64 [Off]	Used to select the scenario index.
Scenario 3	0=Off 1=On [0]	To define the relay output state when scenario called up.
Scenario 4	Off 1... 64 [Off]	Used to select the scenario index.
Scenario 4	0=Off 1=On [0]	To define the relay output state when scenario called up.
Scenario 5	Off 1... 64 [Off]	Used to select the scenario index.
Scenario 5	0=Off 1=On [0]	To define the relay output state when scenario called up.
Scenario 6	Off 1... 64 [Off]	Used to select the scenario index.
Scenario 6	0=Off 1=On [0]	To define the relay output state when scenario called up.
Scenario 7	Off 1... 64 [Off]	Used to select the scenario index.
Scenario 7	0=Off 1=On [0]	To define the relay output state when scenario called up.
Scenario 8	Off 1... 64 [Off]	Used to select the scenario index.
Scenario 8	0=Off 1=On [0]	To define the relay output state when scenario called up.

## Communication objects and ETS parameters

### Output, timed stair light

The following parameters are available for each channel and are identical for all of them. If a channel is configured as stairs the following parameters are visible:

**Stair light parameters** (one-position stable output management)

ETS text	Values available [Default value]	Comment
Type	0=normally closed 1=normally open [0]	To define if the relay output is normally open or closed
Stair Light time [s]	0... 65535 [120]	Output activation time
Warning off	0=off 1=on [0]	To be able to switch the warning function on
Duration of warning [s]	0... 65535	If "Off warning" is on: having set a "warning time" and a "prewarning time", when the relay is switched off after the "stair light time" set, this remains Off for a time equal to the "warning time" and then comes on again for a time equal to the "prewarning time"
	[120]	
Duration of pre-warning [s]	0... 65535	Warning time (if "Off warning" is on). Three times will be added. Having set a "warning time" and a "prewarning time", when the relay is switched off after the "stair light time" set, this remains Off for a time equal to the "warning time" and then comes on again for a time equal to the "prewarning time"
	[120]	
Manual off	0=off	If manual off is active, on receiving an OFF message on the "Stair light" object, if on in one-position stable the output switches off
	1=on	
	[0]	
Centralised switching module function	0=off	To control more than one output from the Bus at the same time
	1=on	
	[0]	
State at block state start	0=Off	If block on
	1=On	
	2=no change	
	[2]	
State at the end of the block state	0=Off	If block on
	1=On	
	2=no change	
	[2]	
Behaviour when powering up the Bus	0=Off	To define the relay output state at bus power on
	1=On	
	2=no change	
	[2]	
Behaviour at Bus power off	0=Off	To define the relay output state at bus power off
	1=On	
	2=no change	
	[2]

## Communication objects and ETS parameters

### Automatic parameter activation

These settings activate objects. Each block has 4 objects, used to automatic controls on 4 objects calling up positions (similar to scenarios).

Block A ☐ Not active ☒ Active

Block B ☐ Not active ☒ Active

Automatic operation parameters

### Parameters in automatic operation

ETS text	Values available [Default value]	Comment
Block A	0=off 1=On [0]	For block A objects 1-4 are activated
Block B	0=off 1=On [0]	For block B objects 1-4 are activated

### Parameters

#### Venetian blinds parameters: characteristics relating to the control of Venetian blinds with slats

ETS text	Values available [Default value]	Comment
Execution time (sec)	1-10000 [45]	Movement time if not stopped
Step time for slats (ms)	100-1000 [200]	Sets the short press time for the button to interpret as slat control
Slat control time (ms)	10-10000 [1200]	Sets the slat control time for each press
Pause at change of direction (ms)	1-1000 [500]	Sets the delay time between the command and the change of direction
Motor start delay (ms)	0-255 [0]	Sets the delay time between the command and the start of movement (useful for motor starting)
Motor power-off delay (ms)	0-255 [0]	Sets the delay time between the command and the end of movement (limit stop)
Slat position at end of driving	0%-100% [50]	Sets the slat position at the end from the reference travel 0-100% having set the limit stop (100% closed)
Slat position at end of driving by absolute value.	0%-100% [50]	Sets the slat position at the end of the movement due to the "Position (absolute)" object
Object selection for absolute position	0=off 1=on [0]	For feedback on the position on a supervisor, if on, 0%=all up and 100%=all down
Reaction after driving to reference	0=no reaction 1=Door to previous position [0]	Only if Position absolute
Driving area: Limitation	0= off 1=on [0]	Only if limitation on: sets the upper/lower thresholds of the Venetian blind travel to stop it before the limit stop
Lower limit	0%-100% [0%]	Only if limitation on (driving area) (100% = closed)

Continued

Complete running time	
Running time	45 [sec]
Step time for slats	200 [ms]
Duration of slats adjustment	1200 [ms]
Pause at change of direction	500 [ms]
Switch-on delay motor	0 [ms]
Switch-off delay motor	0 [ms]
Position of slats at end of driving	50%
Position of slats at end of driving for absolute value	50%
Select objects for absolute position	<input checked="" type="radio"/> Not active <input type="radio"/> Active
Driving area: Limitation	<input checked="" type="radio"/> Not active <input type="radio"/> Active
Scene	<input checked="" type="radio"/> Not active <input type="radio"/> Active
Automatic function (Shutter)	<input checked="" type="radio"/> Not active <input type="radio"/> Active

Venetian blinds parameters

# 4 input/4 output device

## Communication objects and ETS parameters

Continued

ETS text	Values available [Default value]	Comment
Upper limit	0%-100%	Only if limitation on (driving area) (100% = closed)
	[100%]	
Scenario	0= off	Enables the Venetian blind to be included in scenarios
	1=on	
	[0]	
Automatic Operation	0= off	Defines the possibility of having the Venetian blind possibilities with 4 objects devoted to their automatic control from the Bus (Rain, Wind, Frost, Block)
	1=on	
	[0]	
Warning Function	0= off	Used to view the section with "Warning-Out" parameters, to enable the ETS obtaining to be switched on/off (e.g. a weather station) and obtain the automatic movement of the Venetian blinds in the event of rain, wind, frost, block-out
	1=on	
	[0]	

### Roller shutter parameters: characteristics relating to the control of roller shutters (without slats)

ETS text	Values available [Default value]	Comment
Execution time (sec)	1-10000 [45]	Movement time if not stopped
Pause at change of direction (ms)	100÷1000 [500]	Sets the delay time between the command and the change of direction
Motor start delay	0÷255	Sets the delay time between the command and the start of movement (useful for motor starting)
	[0]	
Motor power-off delay	0÷255	Sets the delay time between the command and the end of movement (limit stop)
	[0]	
Select objects for absolute position	0 = Off	Selects the possibility or not to use communication objects to view the actual position of the roller shutter (0%=all up, 100%=all down) for feedback of the position on a supervisor
	1 = Door to previous position	
	[0]	
Reaction after driving to reference	0 = No reaction	If "Select objects for absolute position" on
	1 = Door to previous position	
	[0]	
Driving area: limitation	0 = Off	Only if limitation on: sets the upper/lower thresholds of the Venetian blind travel to make it stop before the limit stop
	1 = On	
	[0]

ETS text	Values available [Default value]	Comment
Scenario	0 = Off	Enables the roller shutter to be included in scenarios
	1 = On	
	[0]	
Automatic operation	0 = Off	Defines the possibility of having the required roller shutter position with 4 objects devoted to their automatic control from the Bus (rain, wind, frost, block)
	1 = On	
	[0]	
Warning Function	0 = Off	Used to view the section with "Warning-Out" parameters, to enable the ETS obtaining to be switched on/off (e.g. a weather station) and obtain the automatic movement of the roller shutters in the event of rain, wind, frost, block-out
	1 = On	
	[0]	

### Scenarios

For each channel, 8 scenarios can be stored and called up. For each scenario, it is possible to select the scenario index, the position of the roller shutter and slats (only for Venetian blinds).

### Scenario parameters: scenario management

ETS text	Values available [Default value]	Comment
Store scenarios	0=off	The "Store scenarios" function is used to store the state linked to a scenario with a message from the Bus (scene learn).
	1=on	
	[0]	
Scenario 1	1-64	Used to select the scenario index.
	Off	
	[Off]	
Scenario 1 Position	0%-100%	Used to select the roller shutter position when the scenario is called up
	[0]	
Scenario 1 - Slats position	0%-100%	Used to select the position of the slats when the scenario is called up (Venetian blinds only)
	[0]	
...		
Scenario 8		

The Store scenarios function is used to store the state linked to a scenario with a message from the Bus (scene learn).

### Warnings Out 1/2 and 3/4

#### Warnings Parameters:

if the "Warning Function" parameter is enabled on the output, to define the operations to be performed automatically in the event of the objects "Rain, Wind, Frost, Block" being activated by the Bus (by interaction with weather stations)

ETS text	Values available [Default value]	Comment
Warning order	0 = Wind, Rain, Frost, Block	To give a priority to the warnings
	1 = Wind, Rain, Block, Frost	
	2 = Wind, Block, Rain, Frost	
	3 = Block, Wind, Rain, Frost	
	[0]	
Action after warnings/block reset	0 = No action	What the output does (Venetian blinds/roller shutter) when the warning or block ends
	4 = Door to previous position	
	1 = Door to higher level	
	2 = Door to lower level	
	[0]	
"Wind" warning	0 = Off	
	1 = On	
	[0]	
Cycle time (min, 0 = Off)	0-120	From the moment the alarm is triggered, a time can be set after which the alarm condition is reset (if no other messages are received)
	[30]	
Action	0 = No action	Defines what happens in the event of a "Wind" alarm
	1 = Door to higher level	
	2 = Door to lower level	
	[0]	
"Rain" warning	0 = Off	
	1 = On	
	[0]	
Cycle time (min, 0 = Off)	0-120	From the moment the alarm is triggered, a time can be set after which the alarm condition is reset (if no other messages are received)
	[30]	
Action	0 = No action	Defines what happens in the event of a "Rain" alarm
	1 = Door to higher level	
	2 = Door to lower level	
	[0]

## Communication objects and ETS parameters

### Single channels 1, 2, 3, 4: the inputs work independently

For each channel there are 6 options:

- Off
- Switching to an object
- Switching to several objects
- Dimmer control with single button
- Roller shutter control with single button
- Counter

### Switching to an object parameters (for sending commands)

ETS text	Values available [Default value]	Comment
Function secondary	0 = Rising edge switching	Rising edge = IN contact closing
	1 = Toggle rising edge	Falling edge = IN contact opening
	2 = Rising edge switching module	Select "Switching module" to send an On or Off for the chosen edge, an no sending when the input state is next changed.
	3 = Toggle falling edge	If "Toggle" is set for each selected edge On/Off/On will be sent in sequence, etc. (but the input state object must also be linked to the same group).
	[1]	
Falling edge value	0 = Off	If "Switching module" is set to "Falling edge" or "Send state"
	1 = On	
	[0]	
Rising edge value	0 = Off	If "Switching module" is set to "Rising edge" or "Send state"
	1 = On	
	[0]	
Value type	1...3000	If the switching module-input is set to "Send value"
	[1]	
Value	1 = Number	Select whether to send a number 0÷255 or a Float 0÷65535 (percentage)
	2 = Float	
	[1]	
Number value	0...255	If the value to send is a number
	[2]	
Float value in degrees 1/100	0-65535	If the value to send is a 1/100 percentage
	[2000]	
Block	0 = off	Enabling this, an object appears that if set to "1" blocks the possibility to control the input
	1 = on	
	[0]

## Communication objects and ETS parameters

### Switching module parameters for several objects (to send commands and values)

You can select whether to send commands (e.g. "On") or a value (e.g. "1 byte") on an input short press, and another (e.g. "Off") or a value (e.g. "2 bytes") on a long press. The time for determining a long press is set in the general parameters.

ETS text	Values available [Default value]	Comment
Type of control	0 = On the edge	On the edge = to be able to select whether to send On or Off on the rising or falling edge on 2 objects
	1 = Short/Long press	Short/Long press = to be able to send commands/Values on a short and long press on 2 or more objects
	2 = Value	Value = to send values of 1 byte or 2 bytes on a short and long press on 2 objects
	3 = Sequence	Sequence = to be able to send sequence cycles of 1 bit or 1 byte on a maximum of 4 objects with short and long press
	[0]	
Values by type of control "On the edge"	0 = Rising edge value	Used to select whether to send On or Off to the rising edge
	1 = Falling edge value	Used to select whether to send On or Off to the falling edge
	[0]	
Values by type of control "Short/Long press". The indicated values can be selected from both short press and long press	No reaction	No action on short press (...long)
	0 = On/Off	Toggle On/Off on short press (...long)
	1 = On	Send On on short press (...long)
	2 = Off	Send Off on short press (...long)
	3 = Scenario	Call up scenario on short press (...long)
	4 = Store scenario	Store scenario on short press (...long)
	5 = Force On	Request forcing to On on short press (...long)
	6 = Force Off	Request forcing to Off on short press (...long)
	7 = Disable forcing	Request force disabling on short press (...long)
	8 = Force On/deactivation	Toggle forcing on and disabling forcing on short press (...long)
	9 = Forced Off/deactivation	Toggle forcing off and disabling forcing on short press (...long)
	[0]	
Values by type of control "Value"	0 = 1 byte	Possibility to select a 1 byte value to send on short press (...long)
	1 = 2 bytes	Possibility to select a 2 bytes value to send on short press (...long)
	[0]

## Communication objects and ETS parameters

### Virtual pocket

The virtual pocket function can be enabled by selecting "Enabled" in the "Input/Output configuration" page. This function is used to check if a room is occupied and signal it in the 1 bit object "Presence in room". To implement the function, at least a motion sensor and a room access door opening and closing signal must be used. The use of another motion sensor or the configuration of an object signalling activity in the room are optional.

The following parameters are available for this function

Waiting time  min

Second movement detector ☐ Disabled ☒ Enabled

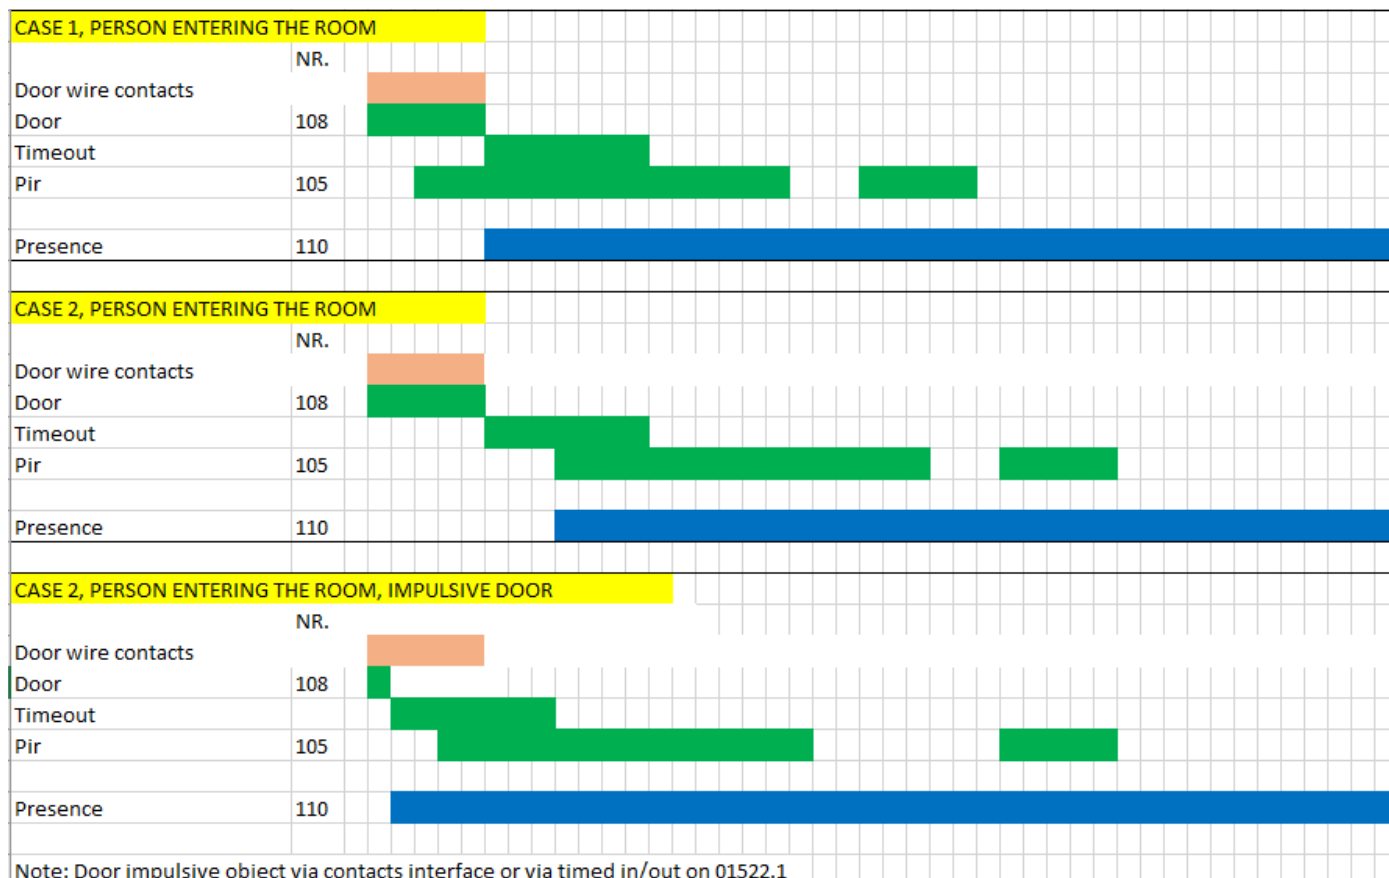

Activity reporting ☐ Disabled ☒ Enabled

Virtual pocket parameters

ETS text	Values available [Default value]	Comment
Wait time	0÷65535 min [5]	To select the presence in room detection wait time from the bus
Second motion sensor	Disabled	To enable a second motion sensor that can signal the presence in the room
	Enabled	
	[Disabled]	
Activity signalling	Disabled	If this parameter is enabled, any command received on the "Activity signalling" object signals the presence in the room
	Enabled	
	[Disabled]	

The graphics below illustrate some cases of using the "virtual pocket" function. In all cases, the door opening and closing is signalled (received on the "Door input" object), as is the movement on a PIR (received on the "First motion sensor" object) and the room occupied is sent (on the "Presence in room" object).

**General note:** The motion sensor disabling time must be less than the timeout ("Wait time" parameter or "Wait time" object) for leaving the room. In this way, at the end of the timeout, the "Presence in room" signal is disabled and the room can be placed in the "not occupied" state.
