

### **Vimar's Eikon Exé presents the new Tondo control**

The simple yet striking design that defines **Eikon Exé** cover plates has inspired a new type of control, **Tondo**, which joins the already comprehensive collection of traditional controls, Vintage and Flat.

**Tondo** has been conceived to bring exclusivity and a more distinctive identity to interior design projects, to indulge those who prefer curved lines that deliver an enveloping and playful effect on the eye. Elegant and discrete, inspired by the classic round-shaped controls with backlighting around the button and a choice of led colours. Made of metal and always featuring matching control and cover plate, it creates a sophisticated Total Look that ensures aesthetic consistency in all 6 variants: Matt White, Anthracite Grey, Brushed Nickel, Brushed Dark Bronze, Gold and Satin-Finish Gold.

Available also in the KNX and By-me Plus version for home&building automation, **Tondo control** challenges the rigidity of conventional shapes and its round silhouette represents the harmonious blend of modern technology and organic architecture reminiscent of the soft contours of nature.

The perfect combination of precision technology and impeccable craftsmanship, available in a variety of materials and prized finishes, from marbled stoneware to metal and glass, Eikon Exé cover plates blend in seamlessly with any environment creating original looks every time, with stylish details that define the identity and personality of each environment. Additionally, it offers a comprehensive range of solutions to customise systems and strike the perfect balance between style and technology in the residential and hospitality sectors. Special finishes and materials, countless colour combinations for both cover plates and buttons, customisable control symbols, and laser engraved logos are options for bespoke projects and a way of adding character to any space.

Designed with sustainability in mind, Eikon's two identities, Exé and Evo, are synonymous with elegance and prestige, featuring state-of-the-art functionalities for superb energy efficiency management. Its control versions, traditional, Vintage, Flat and Tondo, endow the electrical system with unmistakable style. What's more, the series boasts over 200 aesthetically matching functions, also available on international standards to accommodate all requirements.

With Eikon, Vimar once again meets the highest standards of sophistication analysing every aspect of what the customer needs and delivering luxury devoted to technology, innovation, and fine design.
