

The new IP video door entry system.

Open to the future.

IP video door entry systems: open the door to the future.

From listening to market needs come new products using forward-thinking technologies, designed to specifically respond to precise needs. Like the IP technology used in video door entry systems, supporting scalable solutions and introducing new products and new advanced functions such as remote management of video door entry functions from your smartphone with the special Vimar app. These are the assumptions on which the new Tab 7 is based, now also available in the advanced version with built-in Wi-Fi. Solutions embracing innovation while keeping a close eye on design, perfectly adapting to the needs of both small homes and large building complexes.

IP technology: intelligent and advanced, with a whole load of advantages.

A system based on IP technology that overcomes the limits of conventional video door entry systems: performance is enhanced, audio/video communication between indoor and outdoor units becomes multiple and contemporary, the number of users potentially infinite. All this is made completely simple, also through the use of existing LAN networks, without laying any specific wiring.

Scalability and great versatility.

The IP video door entry system was designed to respond in the simplest way to the needs of all kinds of buildings: from single homes to large residential complexes.

Interfacing with existing systems.

The IP technology makes it possible to incorporate the video door entry systems into other existing IP systems, expanding the potential applications. For example, with the Elvox IP CCTV system, or third party SIP devices.

Constant and safe remote control.

IP technology offers advanced video door entry functions and if the system is connected to the internet (for example via a VPN connection), the system parameters can be accessed remotely for maintenance, management and diagnostics.

Simple and intuitive installation.

Self-configuring for the kit version or configurable via the Video Door IP Manager software on a PC for the simple and complex installations, all simplified by an autodiscovery function for Elvox IP video door entry devices. Installation is always quick and functional, supporting the needs of professionals.

Total reliability.

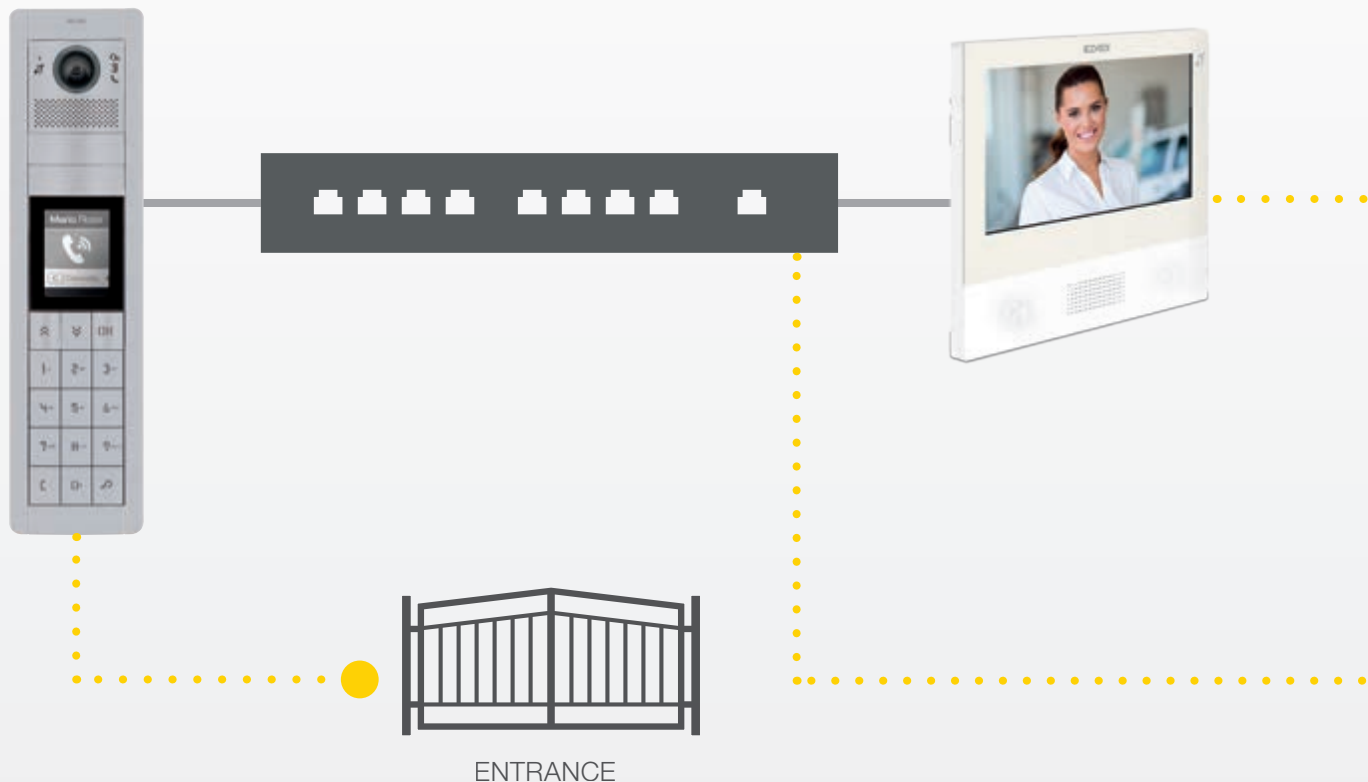

The system data is replicated on the different devices, ensuring constant system operation. Everything is guaranteed to be controlled efficiently at all times, and in the event of a system failure service is restored in just a minute.

IP technology: multiplies the solutions and possibilities for dialogue.

Full coverage.

Performance is enhanced, and the audio and video signal quality is guaranteed and protected, whatever the size of the building complex. For efficient, high-performance communication, 24-7.

LARGE BUILDING COMPLEX

Accessible anywhere by smartphone and tablet.

The Video-Door app can receive the video call, view the video surveillance cameras or open the door, directly from your smartphone or tablet, wherever you are.

RECEPTION SWITCHBOARD

Incomparable expansion.

With IP technology, the video door entry systems can be expanded to include a large number of users. Expansions are as easy as installations: quick and functional by using existing or shared dedicated LAN networks.

IP range products: aesthetics and functions discover a new vision.

IP technology video door entry systems extend the Pixel and Pixel Heavy range with a new electronic audio/video unit which, combined with conventional installation, creates different modular compositions, and the new Tab 7 video door entry unit with 7" LCD display in the Tab 7 version and Tab 7S with built-in Wi-Fi, with its minimalist, elegant design suited to any interior decor style.

Complete, high-performing product range.

Outdoor entrance panels and indoor video entry phone units. The IP technology product range covers all functional and installation needs, offering high-level performance to satisfy the needs of any kind of structure.

PoE power supply flexibility and comfort.

The devices are powered directly via the LAN network Ethernet cables, connected to the PoE ports on the switches. In this way, installation is quicker and more flexible, as no specific power supplies are required.

Quick and simple installation.

The video door entry units can be table-mounted using a special accessory, surface-mounted on a metal plate that is compatible with 2-module round mounting boxes, 3-module rectangular mounting boxes (both horizontally and vertically) and 4+4 modules. The electronic IP audio/video unit works with the electronic expansion units and installation elements in the Pixel and Pixel Heavy series.

New Video Door app

for total connectivity.

The Video Door app is immediate and intuitive, and is used to manage video door entry system functions from your smartphone and tablet. With the built-in Wi-Fi in the Tab 7S, you can use the app to access calls from the entrance panel, make intercom calls, open the lock, and enable auxiliary services - switch on the stair lights or the irrigation system, send and receive text messages or consult recorded messages. The Tab 7S video door entry unit can also be connected to video surveillance cameras, to monitor and view external and internal areas with extreme reliability. The Video Door app is available on Vimar site or Apple or Google Play stores, and thanks to the intuitive and easy interface, it enables the configuration of the smart device (smartphone or tablet), following the instructions step-by-step and through the scan of the QR code, visualized in the screen of the video entryphone, without modifying the settings of the router or subscribe others configuration services.

Guided configuration of Video Door app by the Qrcode scan displayed in your video entryphone.

The app presents clearly and intuitively by means of icons, the functions available.

Pixel and Pixel Heavy IP: modular, versatile and even more innovative.

Attractive and versatile, with a slim, modern design. Just 10 cm wide, it can easily be installed without compromising on either design or technological quality. Highly modular, the installation can be fully customised by matching buttons with different technologies and a 3.5" LCD colour display. In four colour variants: grey, slate, white and anodised grey for Pixel and sable grey for Pixel Heavy, which is designed to stand up even better to knocks and bad weather conditions, today Pixel guarantees even more advanced and high-performing functions thanks to the new electronic audio/video unit with IP technology.

New IP audio/video module

with even better performance.

Perfect video images thanks to:

- **Wide-angle camera** (viewing angle 104° H x 83° V).
- **Automatic image adjustment** depending on the brightness in the recording area.
- **Zoom & Pan**, remote controlled by the Tab 7S IP, if the speaker is not standing perfectly in front of the entrance panel, the function allows you to select the part of the image to view directly on the indoor monitor during the conversation.

Perfect audio reproduction with:

- **Full duplex communication** with echo canceller.
- **Adaptive Noise Compensation:** the microphone level adjusts automatically according to the ambient noise, to ensure perfect talking and listening volume.

Accessibility for hearing impaired users:

thanks to details like the **built-in teleloop**, **voice synthesis** and **LED indicators**.

PoE power supply

supplied by the PoE switch directly from the **LAN connection port**.

PIXEL

PIXEL HEAVY

Total modularity.

Pixel can be composed as desired with 1, 2 or 3 vertical and horizontal modules, for compositions with up to 9 modules, always responding to the most demanding installation needs.

Versatile installation.

Audio and audio/video units, expansion modules with pushbutton module, 3.5" display and alphanumeric keypad - these are the expression of intelligent, innovative technology, offering the added advantage of perfect customisation.

Access control modules.

The expansion modules, alphanumeric keypad and transponder are connected to the LAN network without the need for a dedicated gateway, for perfect access control.

Simple and functional installation.

Designed to support professionals and make programming and maintenance easier.

Alphanumeric
keypad

Transponder

TAB 7 IP and TAB 7S IP: advanced and constantly connected.

The new Tab 7, with its modern and elegant design, comes in two versions: Tab 7 base and Tab 7S with built-in Wi-Fi, for remote management from a smartphone or tablet or using the Video Door app. The advanced version Tab 7S comes with a wide, 7" LCD colour display, capacitive keyboard and touch screen monitor. Available in black or white.

Colour LCD display: high-level visual performance.

Tab 7 comes with a 7" LCD colour display to guarantee even broader and clearer image viewing.

Modern design.

Elegant, in two colour variants: black and white, slim profile and minimum stand-out from the wall. Modern and easy to combine, they enhance any interior design style.

Functions: monitoring

of the IP video cameras connected to the home automation system.

Opening the gate

or entrance door, simply by pressing a button.

Switching the lights on, or activating other functions such as the irrigation system in the garden, etc.

Communication

with reception to warn, for example, of a guest or package on its way.

Capacitive keypad and visual call indicators.

Tab 7 units have a capacitive keypad with Soft-Touch technology for the main functions (reply and door opening). And when the symbol is pressed a visual (backlighting) and acoustic (control tone) feedback confirms the command.

Touch screen display

for advanced control.

The Tab 7S IP version has a touch screen display, allowing you to control all the functions directly from the screen.

Accessibility

supporting every single need.

Tab 7 is equipped with an internal coil for use even by hearing aid wearers and with touch-sensitive aids to facilitate the sight-impaired to identify the main commands.

Alert messages sending.

With Tab 7, it is possible to send a priority request of support to the reception workstation. This function is available only for system where the reception switchboard is installed.

**Touch
screen**

ADDITIONAL
FUNCTIONS
OF
TAB 7 IP

- **Graphic OSD**, 5 soft-touch buttons for surfing the menus and enabling services (such as intercom calls).
- Up to **10** recordable video answering machine messages.
- **Receipt of text messages** from reception switchboard or other TAB 7S IP video door entry units.

ADDITIONAL
FUNCTIONS
OF
TAB 7S IP

- **Built-in Wi-Fi connection.**
- **Touch screen display.**
- **Clear, intuitive and customisable graphic interface** to control all the video door entry functions simply and intuitively (to manage calls, contact list and favourite contacts). Possibility to move icons from the screen using the “drag and drop” function.
- **Remote management** of video door entry functions from your smartphone / tablet via the built-in Wi-Fi and the Video Door app.
- **Up to 100** recordable video answering machine messages.
- **Sending and receipt** of text messages to and from the reception switchboard or other TAB 7S.

Reception switchboard on PC: a precise and reliable welcome.

The reception switchboard can be used via web browser without being installed on the PC, it is the very core of the control functions and can coordinate the communication flows between different units to perfection. It ensures continuous, intelligent and advanced call management, even in large residential complexes.

Intuitive and immediate.

The graphic interface makes the instrument extremely user-friendly, also compatible with touch screen PCs.

Guaranteed continuity of service in the event of failures or PC theft.

The software is App web-based, so is accessible and usable from the web, is not installed on a PC and is therefore independent from any device.

Multi-call management.

It can manage several calls at the same time, with caller preview, call hold and forwarding to the required extension functions.

Video answering service.

It is possible the exchange and viewing of the recorded messages from the entrance panels in case of missed reply of the reception desk.

Management of text messages.

Used by reception to send and receive text messages with or without images. The messages can be sent to single users, groups or in broadcast (for service notices sent to all tenants).

Monitoring of IP cameras.

The graphic interface makes viewing simple, with Elvox IP CCTV range or other cameras.

Simultaneous updating of Web App and configuration in a single tool, Video-door IP Manager.

Multi-switchboard service with constant assistance.

The IP system can manage several porter switchboards at a time, each one managing a specific zone, both in terms of time slots and users managed.

The system can also be configured to allow different switchboards to replace each other effectively.

IP video door entry system: general characteristics

Pixel video entrance panel

Front modules

To match the electronic audio/video units, buttons, displays and alphanumeric keypads. They have steel captive screws for solidly fixing the electronic unit to the support. Available in grey, slate grey or white.

Blank module

Single or double blank module for covering 1 or 2 button seats or blank module for covering the whole electronic unit.

Frame

The anodized aluminium frame IK08 and IP54 with 1 to 3 modules in 4 different finishes: grey, slate grey, white and anodized grey. Supplied with a support for completing the entrance panel with the electronic units.

Electronic units

Electronic audio/video units, with wide-angle video camera with teleloop. Equipped with vertical hinges for easy insertion and fixing to the support.

Flush mounting boxes

The boxes have reinforced side walls to prevent bending during installation and fixing points to strengthen the hold in the wall. Supplied as standard with antimortar (protective cover) and green protective adhesive clip for protection during installation.

Rain guard

Frame to match the flush mounting box, available in 1 to 9 modules (3x3).

Keys

Single (41110) or double (41112) axial button, rocker button (41111) or alphanumeric keypad (41119.xx) to match respectively the button- or keypad-operated electronic units.

Electronic expansion units

Units to match the electronic audio/video units, with call buttons, 3.5" LCD colour display with contact list, alphanumeric keypad and plate with street number or name holder and transponder.

Electronic unit connection cabling

Each electronic expansion unit is supplied with cabling for connection to the audio/video modules, it is also possible to create multiple connections in series, with the 485 mm long cabling (41190).

Fixing nut

The steel nut built into the box ensures fast fixing of the frame.

Support

The die-cast metal support has hinges for inserting/fixing the front modules and electronic units making up the entrance panel. It also has two protective guards (one front and one rear) to protect against water infiltration.

Modularity

Pixel allows you to set up different and customised combinations. Starting with one, two or three modules stacked vertically, as many as three horizontal rows can be created by combining up to nine modules.

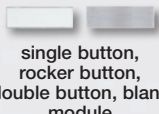

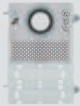

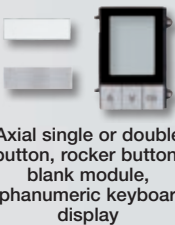

Installation in series and protected cables

The flush mounting boxes can be installed in series with quick and perfect alignment, using the spacers which not only keep the boxes joined firmly but also act as a cable outlet, thanks to the empty, hermetically sealed interior. They come with a cardboard antimortar cover to protect them during installation.

IP video door entry system: general characteristics

Pixel Heavy video entrance panel

Flush mounting boxes

The stainless steel, tear-proof boxes are reinforced to prevent bending during installation. Protective antimortar cover supplied as standard.

Electronic units

Electronic audio/video units, with wide-angle video camera with teleloop. Equipped with vertical hinges for easy insertion and fixing to the support.

Front modules

To match the electronic audio/video units, buttons, displays and alphanumeric keypads. Made from zama, they have steel captive screws for solidly fixing the electronic unit to the support. Available in sable grey version.

Frame

The zama frame is supplied with a support for completing the entrance panel with the electronic units. Available with sable grey finish, from 1 to 3 modules, along with the front modules it has protection rating IK10 and IP54 to withstand knocks and bad weather conditions, ideal for installation in saline environments.

Electronic expansion units

Units to match the electronic audio/video units, with call buttons, 3.5" LCD colour display with contact list, alphanumeric keypad and plate with street number or name holder.

Electronic unit connection cabling

Each electronic expansion unit is supplied with cabling for connection to the audio/video modules, it is also possible to create multiple connections in series, with the 485 mm long cabling (41190).

Support

The zama support has hinges for inserting/fixing the front modules and electronic units making up the entrance panel. It also has two protective guards (one front and one rear) to protect against water infiltration.

Modularity

Pixel Heavy allows you to set up different and customised combinations. Starting with one, two or three modules stacked vertically, as many as three horizontal rows can be created by combining up to nine modules.

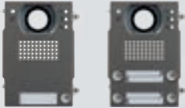

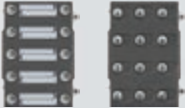

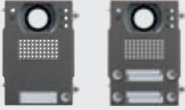

Installation in series

The flush mounting boxes can be installed in series with quick and perfect alignment, using the spacers which keep the boxes joined firmly. They come with a cardboard antimortar cover to protect them during installation.

IP video door entry system: self-configuring kit

Single-family video entry system kit

Kit for the realization of a video door entry system for a single family with IP technology.

The kit contains:

- Hands-free video entryphone with 7" LCD colour screen, capacitive keyboard and touch-screen display for video door entry system functions: talk/listen, door unlocking, self-start, call transfer, auxiliary services (e.g. stair lights), mute and intercom calls. With integrated Wi-Fi for the remote control of the call with the Video Door app.
- a Pixel series 1-module audio/video entrance panel, with IP audio/video electronic unit 41006 with wide-angle colour camera with automatic brightness adjustment, teleloop facility for hearing aids, echo canceller function, automatic sound balancing, automatic loudspeaker level control, automatic microphone level control, 4 call buttons backlit with white LEDs with photocell lighting control, call status indicator LED, electric lock control. Complete of cover plate and mounting frame 41131.01, frontal module grey 41104.01, single button 41110, blank button 41113.01 and mounting box 9191.

Conformity to Standards

EMC Directive, EN 60065, EN 61000-6-1, EN 61000-6-3 e EN 60118-4 Standards.

Technical specifications

Video door entry kit for video door entryphone and entrance panel/lock connection via dedicated IP network, call transfer via Video Door app with smartphone (not supplied). Connection with Ethernet cable, RJ45 interface (not supplied). PoE power supply.

Video door app

Immediate and intuitive app that enables video door entry system functions from smartphone and tablet. Thanks to the integrated Wi-Fi on the video entryphone Tab 7S, by means of the app it is possible to access calls from the entrance panel, make intercom calls, open the lock, enable auxiliary services (switch on the stairs lights, the irrigation system, etc.) send and receive text messages and consult the recorded one. Thanks to the intuitive and easy interface, it enables the configuration of the smart device (smartphone or tablet), following the instructions step-by-step and through the scan of the QR code, visualized in the screen of the video entryphone, without modifying the settings of the router or subscribe others configuration services. It is available on Vimar site or Apple and GooglePlay stores.

Tab 7S IP - Information and functions

Header: user name, date and time.

Settings configurable by the user: user name, device ID name, interface language, date and time (automatic or manual), display and button backlighting brightness, ringtones, volumes, video answering machine message and call options.

Calls log: list of calls, incoming and outgoing, rejected answers and lost calls.

System contact list:

- Home: user video entryphones.
- Favourites: contacts selected by the user for quick access from the Favourites Menu.
- Users: other system users.
- Accessible entrance panels in the system.
- CCTV video cameras configured for access from the video entryphone.
- Reception switchboard stations contactable from the video entryphone.
- Actuators installed in the system the user has access to; for implementing functions such as lock opening or switching on service lighting.

Messages: list of text messages received and sent.

Video messages: list of audio and audio-video messages recorded by the video-answering machine service.

Favourites menu: according to the type of contact it is possible, for example, to start a call or a self-activation, enable an actuator, view the images recorded by a CCTV video camera.

Quick settings menu: access to main controls: ringtone volume, display brightness, activation/deactivation of video answering machine services.

State: views and is used to set the user state "Online" or "Do Not Disturb". In "Do Not Disturb" all calls are refused and, if active, the video answering machine cuts in. In "Online" the calls are notified.

IP video door entry system: Pixel and Pixel Heavy series

Electronic units

Audio/video electronic unit with wide-angle camera and tele-loop for the IP technology installations, to be completed with all modules and accessories of Pixel and Pixel Heavy series (except the electronic unit with fingerprint reader 41016).

The electronic unit is programmed via the Video-Door IP Manager software.

Conformity to Standards

EMC Directive

Standards EN 60065, EN 61000-6-1, EN 61000-6-3 e EN 60118-4.

41006 - Main specifications

- Electronic unit for audio/video entrance panel composition.
- Colour video camera with Full D1@25 Fps resolution and white LED lighting in the recording area with automatic brightness adjustment according to the ambient light.
- Zoom&scan camera mode, controlled directly from the indoor unit.
- 2 picture control modes: standard and portrait enhanced.
- Automatic gain on the speaker power output.
- Echo canceller, to eliminate the Larsen effect.
- Twilight function for automatic brightness adjustment according to the ambient light.
- 4 traditional call buttons to the indoor units in two rows (2+2).
- Possibility to manage up to a maximum of 84 calls with buttons, using additional modules 41010.
- Electric lock control connected directly to the electronic unit.
- Possibility to connect a local button to open a lock or a "Door open" indicator sensor.
- Possibility for basic configurations using the 4 front call buttons and relative 4 indicator LEDs.
- Front LEDs for signalling: call in progress/communication active; lock control activation; communication failed due to line busy.
- Hearing-impaired function for hearing aid wearers.
- Power supply: PoE class 0, from Ethernet network.
- Output for activating an electric lock (peak current $I_T > 1$ A for 10 ms after which a maintenance current $I_M = 200$ mA remains active for the whole duration of the lock control).
- Protection rating IP54.
- Protection rating against knocks IK08 (Pixel), IK10 (Pixel Heavy).

Technical data		41006
Power supply from Ethernet network		PoE, class 0 (IEEE 802.3-2012)
Network interface		RJ45 Ethernet 10/100 Mps (certified)
Recording angle	horizontal	104°
	vertical	83°
Opening at 1 m	horizontal	2.6 m
	vertical	1.8 m
Absorption in operation		10 W
Max. absorption in operation (with 8 additional modules, in conversation and lock active)		500 mA
Operating temperature		from -25° to +55° C

Camera recording area for 41006

Buttons and terminal bar connection

- A) Camera and LED for recording area lighting.
 B) Microphone.
 C) Loudspeaker.
 D) LED for signalling.
 E) Call buttons.
 G) Extractable connection terminal bar
 H) Connector for connecting electronic unit to expansion units by cable.
 I) RJ45 connector.

-

▲ 41006

IP video door entry system: Pixel and Pixel Heavy series

Expansion electronic units

The electronic expansion units must be connected to the audio/video units by adding call buttons, alphanumeric keypad, display with electronic contact list, backlit name holder or street number. The expansion units are supplied with cabling for connection in series with the electronic audio/video unit. For special module arrangements an additional cable 41190, length 485 mm, is available.

Conformity to Standards

EMC Directive

Standards EN 60065, EN 61000-6-1, EN 61000-6-3.

41010 - Main specifications

- Expansion unit with 10 traditional call buttons to indoor units in two rows (5+5).
- LEDs for white button backlighting.
- Cabling for connection to the electronic audio/video unit or another additional module.
- 2 connectors for connection to the modules.
- To be completed with: single axial button (41110), single rocker button (41111), double axial button (41112), or front blank modules (41113.0x, 41114.0x).

Technical data	41010
Power supply from electronic audio/video unit	5 Vdc
Max. absorption in operation	60 mA
Operating temperature	from -25° to +55° C

41017 - Main specifications

- Transponder reader.
- White LED backlighting.
- Possibility to record up to 2000 transponder cards.
- The unit can operate in connection with the audio/video unit 41006 or in stand-alone configuration with local 5 Vdc power supply.
- 1 NO relay output, with programmable activation time, to activate a lock or auxiliary services max 60 Vdc 1 A.
- Possibility to connect a local button to activate the relay output.
- Operating distance < 1 cm.
- Compatible with Vimar programmable transponder card 01598.
- To be completed with front display module (41117).

Technical data	41017
Power supply from electronic audio/video unit	5 Vdc
Max. absorption in operation	250 mA
Network interface	RJ45 Ethernet 10/100 Mps (certified)
Operating temperature	from -25° to +55° C

Possibility for additional power supply 5 Vdc 250 mA.

Module connections

- A) Audio/video electronic unit.
- B) Expansion modules.
- C) Cable supplied.
- D) Cable 41190 (optional).

Connection to audio or audio/video electronic unit, positioned on the side (A)

Connection to audio or audio/video electronic unit, positioned on the centre (A)

IP video door entry system: Pixel and Pixel Heavy series

Expansion electronic units

41010	Electronic unit with 10 buttons in two rows backlit with white LEDs, photocell and manual LED brightness adjustment via audio or audio-video units, complete with frame to be completed with single or double axial buttons, rocker buttons, fixed buttons
41015	Electronic unit with name panel backlit with white LEDs, photocell and manual LED brightness adjustment via audio or audio-video units, to be completed with name panel front cover module
41017	Transponder reader, white LED backlighting, 1 NO relay output, to complete with front module

Expansion electronic units

Conformity to Standards

EMC Directive

Standards EN 60065, EN 61000-6-1, EN 61000-6-3.

41018 - Main specifications

- Expansion unit with 3.5" LCD display, resolution 320 x 480 pixel and 65 K colours.
- 3 buttons for navigation and calls from the electronic contact list.
- Electronic contact list.
- Cabling for connection to the electronic audio/video unit or another additional module.
- 2 connectors for connection to the modules.
- To be completed with front display module (41118.0x).
- Input for additional power supply 5 Vdc 220 mA.
- Possibility to connect a local button for opening the lock.

Technical data	41018
Power supply from electronic audio/video unit	5 Vdc
Max. absorption in operation	220 mA
Operating temperature	from -10° to +55° C

Possibility for additional power supply 5 Vdc 220 mA.

41019 - Main specifications

- Alphanumeric keypad unit for opening the lock using a code on the entrance panel. If connected to the display unit 41018, can also send calls to indoor units.
- 3 buttons for navigation and calls from the electronic contact list.
- Cabling for connection to the electronic audio/video unit or another additional module.
- 2 connectors for connection to the modules.
- To be completed with front keypad module (41119.0x).
- Possibility to connect a local button for opening the lock.
- 1 output for activating auxiliary services max 60 Vdc 1 A.

Technical data	41019
Power supply from electronic audio/video unit	5 Vdc
Max. absorption in operation	220 mA
Operating temperature	from -25° to +55° C

41020 - Main specifications

- Alphanumeric keypad unit for access controls.
- White LED backlighting.
- The unit is supplied with PoE or supplementary 5 Vdc.
- 1 NO relay output, with programmable activation time, to activate a lock or auxiliary services max 60 Vdc 1 A.
- Possibility to connect a local button to activate the actuators.
- To be completed with front keypad module (41119.0x).

Technical data	41019
Power supply from Ethernet network or supplementary	PoE, class 0 (IEEE 802.3-2012) 5 Vdc
Network interface	RJ45 Ethernet 10/100 Mbps (certified)
Max. absorption in operation	250 mA
Operating temperature	from -25° to +55° C

Possibility for additional power supply 5 Vdc 250 mA.

IP video door entry system: Pixel and Pixel Heavy series

Front modules - Pixel Heavy series

The Pixel Heavy entrance panel consists of modular elements combined with the electronic units. The main elements are: electronic units, expansion units, front module with buttons, modules with 3.5" LCD display with electronic contact list, alphanumeric keypad module, etc. Support and entrance panel in zama, protection rating IP54 and IK10, more resistant to knocks and bad weather conditions, ideal for installation in saline environments. Available in special sable grey finish.

Conformity to Standards

EMC directive

Standards EN 60065, EN 61000-6-1, EN 61000-6-3

Installations

- A) Cover plate.
- B) Front modules for electronic units.
- C) Audio/video electronic unit.
- D) Expansion electronic unit.
- E) Electronic unit support.
- F) Flush mounting box.

Installation with waterproof structure

IP video door entry system: Pixel and Pixel Heavy series

Front modules - Pixel Heavy series

41270	Audio/video front module, for 41004 and 41006 electronic unit, for hearing aid function and teleloop symbol, sable grey. IP54 protection degree for atmospheric agents and IK10 against impacts
41271	As above, with 1 button in single row
41272	As above, with 2 buttons in single row
41274	As above, with 4 buttons in double row
41223	3 -button front module, for 41010 electronic unit, sable grey. IP54 and IK10 protection rating against knocks and atmospheric agents
41225	As above, with 5 buttons in single row
41230	As above, with 10 buttons in double row
41218	Display front module, for 41018 electronic unit, sable grey. IP54 and IK10 protection rating against knocks and atmospheric agents
41219	Keypad front module, for 41019 or 41020 electronic units, sable grey. IP54 and IK10 protection rating against knocks and atmospheric agents
41215	Name card/house number front module, for 41015 electronic unit, sable grey. IP54 and IK10 protection rating against knocks and atmospheric agents
41221	Blank front module, sable grey. IP54 and IK10 protection rating against knocks and atmospheric agents

IP video door entry system: Pixel and Pixel Heavy series

Mounting frames and cover plates - Pixel Heavy series

41231	Mounting frame with cover plate, 1 module, sable grey. Dimensions: 99.6x163 mm
41232	Mounting frame with cover plate, 2 modules, sable grey. Dimensions: 99.6x278 mm
41233	Mounting frame with cover plate, 3 modules, sable grey. Dimensions: 99.6x393 mm

Tearproof flush mounting boxes - Pixel Heavy series

40291	Tearproof flush mounting box, stainless steel, 1 module. Dimensions: 82.4x144x50 mm
40292	Tearproof flush mounting box, stainless steel, 2 modules. Dimensions: 82.4x256.5x50 mm
40293	Tearproof flush mounting box, stainless steel, 3 modules. Dimensions: 82.4x369x50 mm

40291

40292

40293

IP video door entry system: Tab 7 series

Tab 7S IP hands-free video entryphones

Hands-free video entryphone with 7" LCD colour screen, capacitive keyboard and touch-screen display for video door entry system functions: talk/listen, door unlocking, self-start, call transfer, auxiliary services (e.g. stair lights), mute and intercom calls.

It is possible to control: brightness, ringtone volume, mute by activating the "User absent" function, or select the type of ringtone. Possibility to differentiate ringtones for calls from different points, for example: entrance panel, landing call, intercom call.

The video door entry unit has a series of functions for hearing aid wearers.

Conformity to Standards

EMC directive

Standards EN 60065, EN 61000-6-1, EN 61000-6-3 and EN 60118-4.

Main specifications

- Power supply: PoE class 0, from Ethernet network.
- 7" LCD display, 800x480 pixel, 16M colours.
- Display with shiny finishing, in white or black version.
- Control of function zoom&scan of the camera.
- Capacitive touch keyboard with backlit symbols (in operation) and touch-screen display.

- Programmable video answering service, up to 100 messages.
- Receipt and sending of text messages.
- Priority request of support to the reception workstation (function available only for system where the reception switchboard is installed).
- System contact list and favourites menu for quick access.
- Full-duplex hands-free with echo canceller.
- Electronic ringtone: with diversification of ringtone for entrance panel, intercom or landing calls.
- Input for landing calls.
- Support for IP CCTV integration.
- Support for remote call service from smartphone/tablet via a Wi-Fi connection.
- Designed for surface mounting installation with hooking plate for fixing to a flush mounting box (Vimar round 2-module V71701, Vimar rectangular vertical/horizontal 3-module V71303/V71703, Vimar rectangular 4+4 modules V71318/V71718).
- Dimensions: 166x184x24.2 mm.

Technical data

Inputs	
power supply from Ethernet network	PoE, class 0
Network interface	RJ45 Ethernet 10/100 Mps (certified)
Absorption in operation	8 W
Ethernet connection	RJ45 - 10/100 Mps
operating temperature	from -5° to +40° C

Tab 7S IP - Information and functions

Header: user name, date and time.

Settings configurable by the user: user name, device ID name, interface language, date and time (automatic or manual), display and button backlighting brightness, ringtones, volumes, video answering machine message and call options.

Calls log: list of calls, incoming and outgoing, rejected answers and lost calls.

System contact list:

- Home: user video entryphones.
- Favourites: contacts selected by the user for quick access from the Favourites Menu.
- Users: other system users.
- Accessible entrance panels in the system.
- CCTV video cameras configured for access from the video entryphone.
- Reception switchboard stations contactable from the video entryphone.
- Actuators installed in the system the user has access to; for implementing functions such as lock opening or switching on service lighting.

Messages: list of text messages received and sent.

Video messages: list of audio and audio-video messages recorded by the video-answering machine service.

Favourites menu: according to the type of contact it is possible, for example, to start a call or a self-activation, enable an actuator, view the images recorded by a CCTV video camera.

Quick settings menu: access to main controls: ringtone volume, display brightness, activation/deactivation of video answering machine services.

State: views and is used to set the user state "Online" or "Do Not Disturb". In "Do Not Disturb" all calls are refused and, if active, the video answering machine cuts in. In "Online" the calls are notified.

Display, buttons and connecting terminal blocks

- A) Touch screen display.
- B) Talk/listen button and lock opening button.
- C) RJ45 connector and terminals for landing calls.
- D) Fixing plate.

power supply from Ethernet network	PoE, class 0
Network interface	RJ45 Ethernet 10/100 Mbps (certified)
Absorption in operation	8 W
operating temperature	from -5° to +40° C

Tab 7 IP - Information and functions

Header: user name, date and time.

Settings configurable by the user: user name, device ID name, interface language, date and time (automatic or manual), display and button backlighting brightness, ringtones, volumes, video answering machine message and call options.

Calls log: list of calls, incoming and outgoing, rejected answers and lost calls.

System contact list:

- Home: user video entryphones.
- Favourites: contacts selected by the user for quick access from the Favourites Menu.
- Users: other system users.
- Accessible entrance panels in the system.
- CCTV video cameras configured for access from the video entryphone.
- Reception switchboard stations contactable from the video entryphone.
- Actuators installed in the system the user has access to; for implementing functions such as lock opening or switching on service lighting.

Messages: list of text messages received and sent.

Video messages: list of audio and audio-video messages recorded by the video-answering machine service.

Favourites menu: according to the type of contact it is possible, for example, to start a call or a self-activation, enable an actuator, view the images recorded by a CCTV video camera.

Quick settings menu: access to main controls: ringtone volume, display brightness, activation/deactivation of video answering machine services.

State: views and is used to set the user state "Online" or "Do Not Disturb". In "Do Not Disturb" all calls are refused and, if active, the video answering machine cuts in. In "Online" the calls are notified.

Buttons and connecting terminal bar

- A) 5 determined buttons.
 B) Talk/listen button and lock opening button.
 C) RJ45 connector and terminals for landing calls.
 D) Fixing plate.

IP video door entry system: Tab 7 series

Tab 7 IP hands-free video entryphones

▲ 40605	Surface mounting hands-free video entryphone for IP system with 7" LCD colour screen, capacitive keypad for video entry functions and intercom calls, teleloop facility for hearing aids, supply voltage PoE, bracket for fixing in round or rectangular box, white
▲ 40605.04	As above, black

IP video door entry system: system components

Device with 2 inputs and 2 outputs

A programmable device with two inputs and two programmable independent relays. Connect to the video door entry system Ethernet network via the connector RJ45. The inputs can be used for: door open indicator, open lock command or other actuations in the system. The relay outputs (NC contact) can control loads conformed to the list beside. It can be powered via PoE or dedicated 5 Vdc power supply. For programming the relay activation times and operating logics, use the Video-Door IP Manager software.

Conformity to standards

LV Directive, EMC Directive

Standards EN 60065, EN 61000-6-1, EN 61000-6-3

Main technical specifications

- RJ45 Ethernet interface 10/100 Mbps, PoE class 0.
- Power supply PoE or 5 Vdc max 300 mA.
- 2 independent opto-isolated inputs for clean contacts or magnetic sensors with maximum 40 m cable.
- 2 bistable relay outputs.
- ABS case on enclosure for DIN (60715 TH35) rail installation, 4 17.5 mm modules.

Technical data

Power supply	PoE class 0 or 5 Vdc < 300 mA
Absorption in operation	2.5 W
Network interface	RJ45 Ethernet 10/100 Mps (certified)
Inputs IN1 and IN2	Clean contacts or magnetic sensors
Outputs OUT1 and OUT2	
Max load types	6 A - resistive load
	6 A - incandescent/halogen lamps
	0.5 A - fluorescent lamps
	100 W - energy saving lamps
	100 W - LED lamps
	4 A - electronic transformers (01860.60 or 01860.105)
	2 A cosφ 0.6 - motor
Operating temperature	from -25° to +55° C

Device for activating optional services

This device is used to activate optional services in the system which require licences, e.g.: reception switchboard, third party SIP devices connected to the system. It is necessary one only device per installation, to connect to the Ethernet network of the video door entry system by the RJ45 connector.

Conformity to standards

EMC Directive

Standards EN 61000-6-1, EN 61000-6-3

Main technical specifications

- RJ45 Ethernet interface 10/100 Mbps, PoE class 0.
- ABS case on enclosure for DIN (60715 TH35) rail installation, 4 17.5 mm modules.

Technical data

Power supply	PoE class 0
Network interface	RJ45 Ethernet 10/100 Mps (certified)
Operating temperature	from -25° to +55° C

Licence for reception switchboard activation

This USB memory device contains 1 licence for activating 1 IP reception switchboard. If more than one switchboard is activated on the same system, more licences are required. Device 40638 must be contained in the system in order to install the licence or licences. The activation of the licence is done inserting it in the section of Video Door Manager configuration software.

Conformity to standards

EMC Directive

Standards EN 61000-6-1, EN 61000-6-3

IP video door entry system: system components

Input/output device

- ▲ **40636** 2-input/2-output device, IP standard, 2 6 A 230 V~ relay outputs, 2 inputs, supply voltage PoE or 5 Vdc, for DIN (60715 TH35) rail installation, occupies 4 17.5 mm modules
-

▲ 40636

IP device for optional services

- ▲ **40638** Device for the enabling optional services after activation of a license, PoE power supply, DIN (60715 TH35) rail installation, occupies 4 17.5 mm modules
-

▲ 40638

Licences

- ▲ **40691** USB storage device containing the license activation code for 1 IP porter switchboard station
-

▲ 40691

IP video door entry system: system specifications

Elvox IP video door entry system

The system guarantees the functions described using the articles in the catalogue for all the following cases, also in combination:

- installation with less than 200 connected devices, i.e. objects connected to the same LAN network via an RJ45 interface, do not calculate IP CCTV cameras and switch;
- installation with up to maximum 3 video reception switchboards;
- management of access control services with standard articles from the catalogue up to 500 users;
- management of up to a maximum 10 video answering machine messages for each reception switchboard installed.

For all other cases and for the integration of third party products/systems, such as VoIP devices with SIP protocol, IP CCTV systems, advanced access control systems, please contact the sales network to consider customized solutions agreed with the system managers. The IP CCTV cameras can not be installed with the entrance panel to operate as call function service.

Installation of up to 200 devices

IP video door entry system: system specifications

Switch for the Elvox IP video door entry system

The Elvox IP video door entry system should be completed with switch that manages the traffic of the LAN network. For a correct system operating, it is recommended the use of switch conform to the network characteristics of the current catalogue.

Installation of the passive network

To realize the infrastructure of passive network for the IP video door entry system, it is recommended to install the Vimar Netsafe structured cabling system with a wide range of products able to realize networks in 5e, 6 and 6A categories, shielded or unshielded in copper or fiber optic connections.

A system with great performances, offering versatile solutions for wide-ranging installations and assuring steady connections over time and for every kind of buildings, from the smallest in residential sector to the biggest to the tertiary sector.

For more information browse the Vimar Netsafe catalogue on the site www.vimar.com.

Network technical data	
Power supply from Ethernet network	PoE, class 0 (IEEE 802.3-2012)
Network interface	RJ45 Ethernet 10/100 Mbps (certified)
